## HARTSFIELD-JACKSON ATLANTA INTERNATIONAL AIRPORT

Beginning September 2017, Hartsfield-Jackson Atlanta International Airport (HJIA) began a series of improvements to transform the customer experience at the world's busiest airport. This \$6 billion modernization project includes revamping the domestic terminal, replacing parking decks near both the North and South terminals and developing a 4-star hotel and travel plaza – projects that will enhance the airport for decades to come.

Through spring 2019, driving, parking and access to ground transportation could be impacted by these various construction projects. We encourage visitors to allow extra time, arrive early and keep these things in mind as you prepare for travel through Atlanta's airport. Visit [next.atl.com](http://next.atl.com) for up-to-date information on these ground transportation services and more.

- Ride share pick-up locations for Uber and Lyft have relocated.
- VIP pickups, meet-and-greets and convention shuttling to and from the airport could be impacted differently each day depending on the progress of the project.

Atlanta Convention & Visitors Bureau wants to help you plan ahead so your meeting progresses on its normal schedule without disruption. Please consider communicating these construction update resources to meeting attendees, shuttle contractors, transportation liaisons or anyone else with logistics involving the airport. As with any construction site, these projects are fluid and could change without advance notice. Please visit [next.atl.com](http://next.atl.com) for the most updated construction news or feel free to reach out to us – we are happy to help!
