Subject: [Research-mla] Volunteer to join a systematic review team by Jan 25
Message-ID: <1357510119.46954.YahooMailNeo@web1212.biz.mail.gq1.yahoo.com>
```

Dear Research Section members,?

I hope many of you saw this opportunity in MLA Focus over the holidays. ?While it is open to all of MLA, we want to especially encourage any interested Research Section members to participate. ?Thanks for reading and Happy New Year!

Kris

Are you interested in expanding the evidence base for Health Sciences Librarianship???

MLA Research Section invites you to share your time and expertise.??We are coordinating the MLA-wide effort to characterize the literature that informs the 15 questions MLA members identified in 2011 as the most important research questions facing health sciences librarianship.??With your help, we will identify several teams of librarians with varied research experience to conduct?systematic reviews?for the questions using a standard protocol with results stored in a centralized database.?

We envision that each team will have at least one member with systematic review experience. However, this is also an opportunity for those seeking to learn more about systematic reviews to grow their knowledge through hands-on practice.

Please consider volunteering for one of the systematic review teams being assembled to review our literature.??One tangible outcome for each contributor will be the opportunity for co-authorship on a published article; additional ways to build skills and share knowledge will arise throughout the process.

Apply online by?Friday, January 25, 2013?at?https://docs.google.com/spreadsheet/viewform?pli=1&formkey=dGkzSDJoRk NwcW9fZmVoWXplVGZRc3c6MQ#gid=0??For more information on how the questions

were identified, see the JMLA article
at?http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3411260/?

Questions about applying can be directed to Jon Eldredge, Chair of
the?Research Agenda Committee, at?jeldredge at salud.unm.edu.??Details of the
plans for the systematic reviews and processes will be shared with MLA
members broadly once teams are finalized and workflows are developed.??Thank
you for your consideration!

Kristine Alpi, Chair, Research Section

Subject: [Research-mla] Upcoming Elections
Message-ID: <CD15B34F.10261%carolemg@wowway.com>

Dear Research Section members

It?s time for your nominating committee to put forth names for the Research
Section officers for 2013-14. This year, we need to elect a chair-elect, a
secretary-treasurer, and a nominee for the MLA nominating committee.

We need to have our slate ready in the next week or two so we can have the
election the first week in February. Results must be sent to Section
Council by mid-February.

So how can you help? Please send names of those whom you think would make
good Section officers to the nominating committee. If you would like to get
involved with the Section, do not hesitate to self-nominate. If you have
questions, don?t hesitate to email or call me. There are some very
interesting activities being planned for the Research Section, so it is
really important that we have a slate of officers within the next week or
so.

Thanks for your consideration. I am looking forward to hearing from you
soon!

Carole

PS Presently, the nominating committee consists of Kay Wellik (wellik.kay@ mayo.edu) and me. According to the bylaws, we need another person. Let me know if you are interested.

Subject: [Research-mla] New and Emerging Roles Survey for Biomedical
        Librarians
Message-ID: <EBE937419CBB7F4FB06BCC2638BB76DD04D506@MLBXV09.nih.gov>

Research Section Members,

I have been asked to forward a survey to our section's membership that will help identify new and emerging roles for biomedical librarians. I apologize for any cross posting. ---Diane Cooper

You are invited to participate in a short survey (requiring about 10 minutes to complete) to identify emerging roles for biomedical librarians. All librarians currently employed in a biomedical setting (academic health sciences center, hospital, research center, etc.) are eligible to participate.

This survey is part of a study being conducted to identify and describe emerging roles for biomedical librarians, including when, where, and how these roles are being developed. We hope that the results of this study will provide a current benchmark and inform library planning, library education, and continuing education. We hope you will help us with this project by participating in this survey.

Please go to https://www.surveymonkey.com/s/6RMM9JX to complete the survey.

Thanks.

Janet

From slessick at uci.edu Mon Jan 28 20:17:12 2013
From: slessick at uci.edu (Susan Lessick)
Date: Mon, 28 Jan 2013 18:17:12 -0800
Subject: [Research-mla] Call for Virtual Projects for new JMLA column
In-Reply-To: <51070C9C.3060503@uci.edu>
References: <51070C9C.3060503@uci.edu>
Message-ID: <51073128.8020509@uci.edu>

*
Call for Virtual Projects for new /JMLA/ column. Submit projects by
March 15, 2013.*

The /Journal of the Medical Library Association (JMLA)/ is planning to
devote a new annual column to describing innovative and notable virtual
projects in health sciences libraries. This column will complement the
annual Building Projects column which was launched in July 2012 but
focuses on library virtual spaces. Given an increasingly digital world,
the library's virtual space can be as much of a hub as the library's
physical space, where digital content and technology-rich library
services are moving the library "presence" outside the physical building
to support users in their digital spaces wherever and whenever needed.

The /JMLA /welcomes your submissions of recent virtual projects for the
upcoming Virtual Projects column that will be published in October 2013.
To be considered for this column, please submit a 200 word abstract of
your virtual project or a link to your project web page that describes
the project and why it is innovative/notable. Send your submissions to
Susan Lessick, AHIP, FMLA, slessick at uci.edu <mailto:slessick at uci.edu>,
by March 15, 2013. Examples of health sciences library projects that
could be submitted include:

  * projects that improve the quality of the library's virtual presence
    through webpages or its catalog
  * development of technologies that facilitate information discovery
    and content delivery (e.g. federated searching products and portals)
  * mobile-friendly resource and service initiatives
  * development of web 2.0/Library 2.0 initiatives (e.g. social

networking applications)
  * hosting and preserving digital content activities
  * projects that demonstrate the use of library resources and services
    through the institution's Electronic Health Record (EHR)
  * collaborative ventures with campus or other partners to develop new
    digital resources and services

Behalf Of Patti Reynolds
Sent: Tuesday, January 29, 2013 11:27 AM
To: MEDLIB-L at LIST.UVM.EDU
Subject: Library closings

As hospital libraries continue to close I wonder if anyone has studied the
effects of these closures. Are hospitals leaving the responsibility of
standards and knowledge up to the physicians and nursing staff to pay for
themselves? What is the hospital responsible for in terms of maintaining
relevant necessary information.? And what is replacing the hospital library?
As an electronic library, I have more work now than I ever had in the past
maintaining, teaching, purchasing, etc. Not to mention docline, Linkout,
etc. I run the only medical library in a 3 county region with 6 major
hospitals and many rehab facilities. I am really at a loss as to what is
filling the void?

Any thoughts?

 Seeks 2 Associate Editors
Message-ID: <5118DD2D020000B5000198F6@hsc-iagate1.health.unm.edu>

Dear Research Section Colleague,

I have been associated with this open access peer reviewed journal pretty
much since its inception during 2006. For the past few years I have served as
the Associate Editor for classics, and have found it to be a worthwhile
experience.

Please see the job descriptions below to determine if you might want to
enrich yourself professionally while working with some amazing colleagues
from other countries.

>>> EBLIP Journal <eblipjournal at GMAIL.COM> 2/11/2013 11:02 AM >>>

Evidence Based Library and Information Practice (EBLIP) is expanding and
restructuring. EBLIP is looking for two additional Associate Editors to join
our Editorial Team. One will be responsible for Articles and the second will
be responsible for Evidence Summaries. Ideally candidates will be in place by
April 2013 and will serve a 3 year term.

The Associate Editor (Articles) will become one of two Associate Editors (Articles) and will be responsible for:
Overseeing the complete editorial process for items submitted to the Articles section (this includes assignment of peer reviewers, monitoring the peer review process, communicating with authors and peer reviewers, making acceptance decisions, ensuring required changes to manuscripts are made, communicating with copyeditors and the production editor to ensure the final copy is as expected). Communicating and consulting with the Editor-in-Chief on a regular basis.Attending Editorial Team meetings, via Skype, on a monthly basis and participating in the overall governance of the journal.Ensuring that all necessary deadlines are met. Communicating with potential authors and responding to queries.

The Associate Editor (Evidence Summaries) will be responsible for:
Supervising a team of Evidence Summary writers.
Identifying published research articles for assignment to ES writers for appraisal and commentary.
Overseeing the complete editorial process for items selected for the Evidence Summary Section (this includes assignment of peer reviewers, monitoring the peer review process, communicating with ES writers and peer reviewers, making acceptance decisions, ensuring required changes to manuscripts are made, communicating with copyeditors and the production editor to ensure the final copy is as expected.
Communicating and consulting with the Editor-in-Chief on a regular basis.
Attending Editorial Team meetings, via Skype, on a monthly basis and participating in the overall governance of the journal.
Ensuring that all necessary deadlines are met.

The ideal candidates will be well-versed in evidence based practice and research methods. These positions require dedicated time on a regular basis, and it is therefore essential that interested persons ensure available time to devote to this position prior to applying. It is estimated that the workload is approximately 10-15 hours per month. Terms of office are renewable once.

Interested persons should send a statement of interest, indicating the post of interest, areas of strength they would bring to the role, and a brief resume to Alison Brettle, Editor-in-Chief, at a.brettle at salford.ac.uk by 4 March 2013.

Specific queries about each role should be addressed to:

Alison Brettle (a.brettle at salford.ac.uk) for Associate Editor (Articles) position
Lorie Kloda (lorie.kloda at mcgill.ca) for Associate Editor (Evidence Summaries) position

**Please note that Evidence Based Library and Information Practice is a non-profit, open access journal and all positions are voluntary and unpaid.

About the journal:

Published quarterly, and hosted by the University of Alberta, this peer-reviewed, open access journal is targeted at all library and information professionals interested in an evidence based model of practice. By facilitating access to librarianship research via original research articles

and evidence summaries of relevant research from the library literature,
Evidence Based Library and Information Practice will enable librarians to
practice their profession in an evidence based manner.
Please visit the Evidence Based Library and Information Practice web site
(http://ejournals.library.ualberta.ca/index.php/EBLIP (
https://staffwebmail.salford.ac.uk/exchweb/bin/redir.asp?URL=http://ejournals
.library.ualberta.ca/index.php/EBLIP)) for further information about the
journal.

Terrie,
Please pass this along to Pattie,

A couple of years ago I surveyed a number of supervisors in five hospitals in
Wyoming. Although I focused on whether our students were prepared to search
for information after leaving UW, I also wanted to know what resources were
used in the state. Two of the hospitals had libraries (One has since been
closed) and three did not have libraries.

The hospitals with libraries had, as expected, a substantial budget for
databases and electronic and print subscriptions. The supervisors and their
staff relied heavily on the librarian and the resources. They also were more
familiar with resources that were available to them without charge. All ILLs
were directed through the librarian, who utilized Free Share and other groups
that would share resources.

The Hospitals without libraries had access to fewer resources, as expected.
Specific departments purchased access to one subscription, such as LexiComp
for pharmacy and one hospital had CINAHL for nursing. They might have access
to Up-to-Date for physicians and Micromedex was also in use. One hospital
pharmacy department were aware of, and using databases available through
WYLD, a library consortium that provides databases through public and
academic libraries. We have Cochrane and a few nursing databases. That
department also used PubMed. The other two hospitals were unaware of the
databases they could access at no charge, both through the state and NLM.
They did not use PubMed, but relied on other sources, such as MedlinePlus.
When an article was wanted, someone in the hospital (no one knew quite who
that person was) would purchase the article directly from the publisher. They
did not know about Loansome Doc, which would be available through Coe Library
at UW.

Surprisingly, all the supervisors answered immediately that evidence based
practice was used in their hospital.

Although this was only five hospitals in a very rural state with a small population, I would be surprised if access to information was much different in other hospitals without libraries.

copy or use this e-mail or any attachments for any purpose, nor disclose all
or any part of the contents to any other person.

What I would love to see at some point is research that compares accepted
measures of hospital success with whether or not they have strong library
services. For example, there's increasing attention being paid to
readmission statistics. Do hospitals that have effective library services
do better on this measure than hospitals that don't? How about length of
stay? Or medical error rates.

Ultimately it seems to me that we have to be able to make the case that
hospitals that have quality library services do better on the metrics that
matter most to hospital administrators and hospital regulators.

Subject: Re: [Research-mla] Library closings

Terrie,
Please pass this along to Pattie,

A couple of years ago I surveyed a number of supervisors in five hospitals in
Wyoming. Although I focused on whether our students were prepared to search
for information after leaving UW, I also wanted to know what resources were
used in the state. Two of the hospitals had libraries (One has since been
closed) and three did not have libraries.

The hospitals with libraries had, as expected, a substantial budget for databases and electronic and print subscriptions. The supervisors and their staff relied heavily on the librarian and the resources. They also were more familiar with resources that were available to them without charge. All ILLs were directed through the librarian, who utilized Free Share and other groups that would share resources.

The Hospitals without libraries had access to fewer resources, as expected. Specific departments purchased access to one subscription, such as LexiComp for pharmacy and one hospital had CINAHL for nursing. They might have access to Up-to-Date for physicians and Micromedex was also in use. One hospital pharmacy department were aware of, and using databases available through WYLD, a library consortium that provides databases through public and academic libraries. We have Cochrane and a few nursing databases. That department also used PubMed. The other two hospitals were unaware of the databases they could access at no charge, both through the state and NLM. They did not use PubMed, but relied on other sources, such as MedlinePlus. When an article was wanted, someone in the hospital (no one knew quite who that person was) would purchase the article directly from the publisher. They did not know about Loansome Doc, which would be available through Coe Library at UW.

Surprisingly, all the supervisors answered immediately that evidence based practice was used in their hospital.

Although this was only five hospitals in a very rural state with a small population, I would be surprised if access to information was much different in other hospitals without libraries.

As hospital libraries continue to close I wonder if anyone has studied the effects of these closures. Are hospitals leaving the responsibility of standards and knowledge up to the physicians and nursing staff to pay for themselves? What is the hospital responsible for in terms of maintaining relevant necessary information.? And what is replacing the hospital library? As an electronic library, I have more work now than I ever had in the past maintaining, teaching, purchasing, etc. Not to mention docline, Linkout,

etc. I run the only medical library in a 3 county region with 6 major
hospitals and many rehab facilities. I am really at a loss as to what is
filling the void?

Any thoughts?

YES YES YES! I have been saying that we need to establish the presence of a
medical librarian as a quality indicator, by associating librarians' services
and outcome measures, risk avoidance (medical errors, etc.), cost-saving
value analysis, etc.   Jenny had a poster that intrigued me because it made a
small start at establishing such an association. If it could be developed
into a really rigorous study that showed how much value a librarian adds, and
that establishes librarians as indicators of hospital quality by as many

measures as possible, we might be able to look forward to a day when hospitals started adding librarian positions.

BTW, at least five MLS librarians work in my hospital, but only three as medical librarians in the library! Clearly, our skills have value . . . .

I second the YES! YES! YES! We do need research in this area! Evidence-Based
Librarianship. I know there must be a correlation between a professionally
staffed medical library in a hospital that is actually used by the clinical
and managerial staff and better outcomes, patient safety, ROI. MLA is
currently putting together teams of librarians to conduct systematic reviews
to provide such evidence. I have volunteered to service on one of the
systematic renew teams.

Hospital libraries have closed in my area over the past few years, many
hospital librarian positions have been eliminated upon being vacated for one
reason or another, and many hospital librarians who still have jobs are no
longer working full-time. I see this as not just a local problem but a
national issue that will indeed impact the quality of care in the USA.

My employer, the largest teaching hospital in the area, closed its long term
8,000 square foot library facility located in a prominent spot at the
hospital to repurpose the space for non-clinical personnel offices and
relocated the library to a 2,500 sq. ft. facility off campus. Only 10% of the
print collection was moved, the rest was disposed of, and library daily
average visits dropped from 200 to 20. In addition, there was a 50% staff
reduction - one librarian position out of two and one library technician
position out of two were eliminated. I am the surviving librarian and am
struggling to keep up with the workload that comes with what was once close
to a university level library operation. Not a day goes by when we don't get
a request for an article that was in the portion of the discarded print
collection. No additional funding was provided to replace the discarded print
with online archives. The reduction in staff came with a significantly
reduced budget which required the elimination of parts of the online
collection. We are still a Net Docline Lender but can no longer lend the
volume that we once could which is definitely impacting the access to
knowledge-based information for many other hospitals around the country. This
library is in a sorry state and the hospital management does not get it. I
did present a 255% ROI for the calendar year 2011 to no avail. I am once
again trying to get a system-wide online library established since my
employer is part of a 6-hospital system. My past attempts have failed because
the other hospitals claimed they were only community hospitals so did not
need to increase library resources or services (there is only one other
hospital in the system with a librarian who's position was reduced to half-
time) and the corporate executives claimed that physicians and hospital staff
could just use the local university libraries. The claim was that everything
is available online! We do have a handful of resources licensed for system-
wide access but no one is responsible for marketing them or providing
training on them. The corporate Medical Library intranet site that exists is
not updated on a regular basis since no one is assigned to keep it current.
Each hospital maintains their own library or libraryish intranet site so if

individual hospital library clients use the corporate site, they will not have access to all that their individual campus is licensing. As I said, it?s a mess.

I am serving my first year as the appointed MLA Liaison to the Joint Commission and attended the 2012 JC Forum for Association Representatives. I could see many ways librarians could to help all represented associations help their hospitals comply with JC requirements for accreditation. Librarians, as we all know, could sure make a difference on many hospital committees if we were just given the opportunity to join them and had time to make the contributions that only librarians can make. The MLA HLS Hospital Library Standards Committee is writing a paper to support which committees a hospital librarian should be on to support the MLA Hospital Library Standards. This committee will present this paper as a poster at MLA13.

It appears to me that many groups are working on pulling together evidence to support hiring medical librarians to manage quality medical libraries in hospitals. I'm sure the results of the current efforts will be that more research is needed which means we need to create a way to submit what we are individually doing so that our efforts are joined and recorded as more evidence. How do we do that? We have many brilliant hospital librarians and non-hospital librarians in MLA interested in truly supported evidence-based medical/nursing/etc. practices that require professionally run medical libraries so I'm sure that working together we can find a way. Maybe we should have an open forum to discuss this at MLA each year. After all, the USA Healthcare System needs an overhaul. Quality patient care should be an option for all of us who will need it at some point in our lives. We have the knowledge to make a difference. We just need to figure out how to get the executive healthcare decision makers to look at our evidence and understand it. If we are all providing a 255% ROI, then it really costs hospitals more not to have a professionally run medical library!

And yes, a librarian is working at my hospital as the Director for Customer, Interpreter, and Volunteer Services. Our skills are truly valuable outside the library.

Subject: Re: [Research-mla] Library closings

What I would love to see at some point is research that compares accepted measures of hospital success with whether or not they have strong library services. For example, there's increasing attention being paid to readmission statistics. Do hospitals that have effective library services do better on this measure than hospitals that don't? How about length of stay? Or medical error rates.

Ultimately it seems to me that we have to be able to make the case that hospitals that have quality library services do better on the metrics that matter most to hospital administrators and hospital regulators.

Subject: Re: [Research-mla] Library closings

Terrie,
Please pass this along to Pattie,

A couple of years ago I surveyed a number of supervisors in five hospitals in Wyoming. Although I focused on whether our students were prepared to search for information after leaving UW, I also wanted to know what resources were used in the state. Two of the hospitals had libraries (One has since been closed) and three did not have libraries.

The hospitals with libraries had, as expected, a substantial budget for databases and electronic and print subscriptions. The supervisors and their staff relied heavily on the librarian and the resources. They also were more familiar with resources that were available to them without charge. All ILLs were directed through the librarian, who utilized Free Share and other groups that would share resources.

The Hospitals without libraries had access to fewer resources, as expected. Specific departments purchased access to one subscription, such as LexiComp for pharmacy and one hospital had CINAHL for nursing. They might have access to Up-to-Date for physicians and Micromedex was also in use. One hospital pharmacy department were aware of, and using databases available through WYLD, a library consortium that provides databases through public and academic libraries. We have Cochrane and a few nursing databases. That department also used PubMed. The other two hospitals were unaware of the databases they could access at no charge, both through the state and NLM. They did not use PubMed, but relied on other sources, such as MedlinePlus. When an article was wanted, someone in the hospital (no one knew quite who that person was) would purchase the article directly from the publisher. They did not know about Loansome Doc, which would be available through Coe Library at UW.

Surprisingly, all the supervisors answered immediately that evidence based practice was used in their hospital.

Although this was only five hospitals in a very rural state with a small population, I would be surprised if access to information was much different in other hospitals without libraries.

Subject: Library closings

As hospital libraries continue to close I wonder if anyone has studied the effects of these closures. Are hospitals leaving the responsibility of standards and knowledge up to the physicians and nursing staff to pay for themselves? What is the hospital responsible for in terms of maintaining relevant necessary information.? And what is replacing the hospital library? As an electronic library, I have more work now than I ever had in the past maintaining, teaching, purchasing, etc. Not to mention docline, Linkout, etc. I run the only medical library in a 3 county region with 6 major

hospitals and many rehab facilities. I am really at a loss as to what is filling the void?

Any thoughts?

From bpfannenstiel at cmh.edu Thu Feb 14 11:41:48 2013
From: bpfannenstiel at cmh.edu (Pfannenstiel, Brenda, R)

Hi, Jenny,

I have been thinking for some time that once I have completed my MCMLA duties
I would like to find some time to do a research project before I retire, and
I keep thinking about your poster. My hospital is considered a leader among
children's hospitals in patient safety and quality improvement efforts, and
has been raising its profile steadily in pediatric graduate medical
education. This has driven a lot of library use, and has caused my hospital
to generate a lot of data that they are reporting to various organizations. I
would like to get my hands on some of the data that I believe various
hospital administrators pay to access and that they contribute to, through
the Child Health Corporation of
America<http://www.chca.com/index_no_flash.html> and through H-CUP
KID<http://www.hcup-us.ahrq.gov/databases.jsp>, etc. to compare with hospital
library/librarian availability.

H-CUP might be an affordable source of data for comparing outcomes in
hospitals to library/librarian availability as I believe anyone can buy the
disks at a relatively modest price. It wouldn't prove a cause and effect
relationship, of course, but it might establish the librarian as a quality
indicator for an institution. I.e., institutions of proven quality have
librarians, institutions with lesser quality do not have librarians,
therefore institutions with librarians are likely to have superior quality.

I believe that a lot of data is collected and analyzed privately by
organizations that only share with members, and a lot of data is deliberately
not collected (due to the expense and due to the possibly unflattering
results). Government data is low-hanging fruit, but it would be great if
hospital librarians could discover and exploit their hospitals' access to
additional data that is not publicly available.

Pisciotta, Woelfl et al did a ROI study concerning the link between library
services and research dollars gained by the parent institution, which was an
interesting way to document the value of a university medical library.

The January JMLA has an article bearing on this question, by Joanne Marshall
et al. - http://www.mlanet.org/members/pdf/jmla_preprints/jan2013marshall.pdf

Our library participated in the study reported there, and we found the
results helpful in documenting the value of library and librarian support to
our hospital. It would be interesting to further correlate these results with
external measures as suggested by other respondents, but I think the study
got at many of the same issues.

Subject: Re: [Research-mla] Hospital librarian research

Hi, Jenny,

I have been thinking for some time that once I have completed my MCMLA duties I would like to find some time to do a research project before I retire, and I keep thinking about your poster. My hospital is considered a leader among children's hospitals in patient safety and quality improvement efforts, and has been raising its profile steadily in pediatric graduate medical education. This has driven a lot of library use, and has caused my hospital to generate a lot of data that they are reporting to various organizations. I would like to get my hands on some of the data that I believe various hospital administrators pay to access and that they contribute to, through the Child Health Corporation of America<http://www.chca.com/index_no_flash.html> and through H-CUP KID<http://www.hcup-us.ahrq.gov/databases.jsp>, etc. to compare with hospital library/librarian availability.

H-CUP might be an affordable source of data for comparing outcomes in hospitals to library/librarian availability as I believe anyone can buy the disks at a relatively modest price. It wouldn't prove a cause and effect relationship, of course, but it might establish the librarian as a quality indicator for an institution. I.e., institutions of proven quality have librarians, institutions with lesser quality do not have librarians, therefore institutions with librarians are likely to have superior quality.

I believe that a lot of data is collected and analyzed privately by organizations that only share with members, and a lot of data is deliberately not collected (due to the expense and due to the possibly unflattering results). Government data is low-hanging fruit, but it would be great if hospital librarians could discover and exploit their hospitals' access to additional data that is not publicly available.

Pisciotta, Woelfl et al did a ROI study concerning the link between library services and research dollars gained by the parent institution, which was an interesting way to document the value of a university medical library.

research.mlanet.org'
Subject: Re: [Research-mla] Library closings

Thanks for remembering that poster, Brenda. I compared the Healthgrades top
hospitals with DocUser libraries. In that study I found that only 30% of the
community hospitals in the US still had libraries. However, 72% of the
community hospitals identified by Healthgrades as the top in quality
measurements had hospital libraries. That is hugely statistically
significant.

The date Healthgrades and the other quality monitoring groups comes from
Medicare. I think that data can be accessed free of charge, as it is US
government. I think it would be feasible to do a more formal study
identifying which high quality hospitals have libraries and dig deeper to see
how the library impacts quality of care.

The hospitals know in advance what Medicare is going to monitor, and I think
the report is only for Medicare/Medicaid patients. I think this leaves some
questions: Do the hospitals focus more on quality for the criteria that is
reported? How does this bias the reporting and care? How are quality measured
nationally for non-Medicare/Medicaid patients and is that data available? How
is quality measured for unusual/rare cases?

My theory when I found the relationship between top hospitals and
libraries was the corporate culture valued library services and encouraged
the use of the library resources and librarian expertise. Making a direct
link is pretty tough.

I like the idea of librarian as a quality indicator. Keep that study in the
back of your mind and you probably will have a lot of the details figured out
by the time your MCMLA duties are over.

Subject: RE: [Research-mla] Hospital librarian research

Hi, Jenny,

I have been thinking for some time that once I have completed my MCMLA duties I would like to find some time to do a research project before I retire, and I keep thinking about your poster. My hospital is considered a leader among children's hospitals in patient safety and quality improvement efforts, and has been raising its profile steadily in pediatric graduate medical education. This has driven a lot of library use, and has caused my hospital to generate a lot of data that they are reporting to various organizations. I would like to get my hands on some of the data that I believe various hospital administrators pay to access and that they contribute to, through the Child Health Corporation of America<http://www.chca.com/index_no_flash.html> and through H-CUP KID<http://www.hcup-us.ahrq.gov/databases.jsp>, etc. to compare with hospital library/librarian availability.

H-CUP might be an affordable source of data for comparing outcomes in hospitals to library/librarian availability as I believe anyone can buy the disks at a relatively modest price. It wouldn't prove a cause and effect relationship, of course, but it might establish the librarian as a quality indicator for an institution. I.e., institutions of proven quality have librarians, institutions with lesser quality do not have librarians, therefore institutions with librarians are likely to have superior quality.

I believe that a lot of data is collected and analyzed privately by organizations that only share with members, and a lot of data is deliberately not collected (due to the expense and due to the possibly unflattering results). Government data is low-hanging fruit, but it would be great if hospital librarians could discover and exploit their hospitals? access to additional data that is not publicly available.

Pisciotta, Woelfl et al did a ROI study concerning the link between library services and research dollars gained by the parent institution, which was an interesting way to document the value of a university medical library.

-----Original Message-----

Thanks for remembering that poster, Brenda. I compared the Healthgrades top
hospitals with DocUser libraries. In that study I found that only 30% of the
community hospitals in the US still had libraries. However, 72% of the
community hospitals identified by Healthgrades as the top in quality
measurements had hospital libraries. That is hugely statistically
significant.

The date Healthgrades and the other quality monitoring groups comes from
Medicare. I think that data can be accessed free of charge, as it is US
government. I think it would be feasible to do a more formal study
identifying which high quality hospitals have libraries and dig deeper to see
how the library impacts quality of care.

The hospitals know in advance what Medicare is going to monitor, and I think
the report is only for Medicare/Medicaid patients. I think this leaves some
questions: Do the hospitals focus more on quality for the criteria that is
reported? How does this bias the reporting and care? How are quality measured
nationally for non-Medicare/Medicaid patients and is that data available? How
is quality measured for unusual/rare cases?

Subject: [Research-mla] Research Section Election
Message-ID: <CD431CBA.1065B%carolemg@wowway.com>

The Nominating and Elections Committee is delighted to announce the results
of the election of new officers for the Research Section.
They are:
    Chair-elect: Merle Rosenzweig, University of Michigan
    Secretary-Treasurer: Heather Coates, IUPUI
    Potential Nominee to the MLA Nominating Committee : Jonathan Eldredge,
University of New Mexico.

Congratulations to these new officers and thanks to all those who were
willing to run for office. It is you who make this section a success!

The new officers will begin their duties at the end of MLA in Boston.

Message-ID: <82085BDE07CF804AA4B0DA15480F97CE4A46D2AD@mailbox1.lib.msu.edu>

Hi Everyone,

The MLA Research Section's Research Agenda Committee has been working on this and related issues since 2008. Please see our most recent article:

Eldredge JD, Ascher MT, Holmes HN, Harris MR. The new Medical Library Association research agenda: final results from a three-phase Delphi study. J Med Libr Assoc. 2012 Jul;100(3):214-8. doi: 10.3163/1536-5050.100.3.012.

You can access it via PubMed:
http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3411260/

You'll note that Table 1 on Page 216 lists the top-ranked 15 questions with a number of them related either directly or indirectly to this issue.

The latest issue of the Research Section's journal, Hypothesis, that was distributed this morning on the listserv contains the full list of questions with an analysis. Most of these research questions relate directly to the value of the services we provide. The systematic reviews will identify existing research and will help identify gaps that researchers should fill.

The Research Mentor column on pages 19-20 also describes a project involving 15 teams of librarians about to embark on compiling systematic reviews on these 15 top-ranked research questions. We had over 200 volunteers from the US, Canada, Australia, and the UK who volunteered for one of these teams.

Please familiarize yourself with these publications because they chart a path to addressing this issue. We look forward to sharing the results with you in the future.

Kind regards,

To: CANMEDLIB at CLIFFY.UCS.MUN.CA<mailto:CANMEDLIB at CLIFFY.UCS.MUN.CA>
Subject: [CANMEDLIB] Study into information needs of LGBTQ health
professionals

Hello

I am a medical librarian at McGill University in Montreal, Canada and I'd
like to ask members of this list to help me publicise a study I am currently
conducting into the information needs and information seeking behaviour of
LGBTQ health professionals and their interaction with medical librarians.
I'm keen to have as many results as possible from LGBTQ health professionals
in order to ensure that the results are representative so please feel free to
send the link to this survey (see below) to anybody you think might want to
take part, and please feel free to encourage them to do the same.

This is a follow-up study to previous work undertaken in 2003
(http://www.ncbi.nlm.nih.gov/pubmed/?term=14762463[pmid]<http://www.ncbi.nlm.
nih.gov/pubmed/?term=14762463%5bpmid%5d>), with additional questions to
assess the impact of internet resources and changes in library services.

The text of my invitation letter to participants is below, and the survey
itself can be completed by following this link:

https://surveys.mcgill.ca/limesurvey/index.php?sid=62812&lang=en

The survey is, of course, completely confidential and I promise to respect the anonymity of all participants. Please do get back in touch if you have any further questions.

Many thanks, and apologies if you receive this message more than once from different listservs.

Martin

Dear Health Professional,

I invite you to take part in an online survey to investigate the use of medical libraries and librarians by lesbian, gay, bisexual, transgender and/or queer (LGBTQ) health professionals. This project is important because it will help to enable medical libraries and medical librarians to continue to meet the needs of LGBTQ health professionals in the future.

The survey consists of 20 short questions, which should take no more than 15 minutes to complete. Participation is open to health professionals in all areas of health care who identify as lesbian, gay, bisexual, queer, and/or transgender and who are 18 years or older.

I hope that you will choose to respond to the questionnaire; you are also very welcome to pass the survey link to any other colleagues who may be interested in taking part.

I would like to assure you that the survey is completely anonymous and that I will destroy all data gathered upon completion of the final report. It is my intention to disseminate the anonymized, combined results at a medical librarianship conference and through publication of a journal article. I would also be very happy to send a copy of the results to any respondent who indicates they would like to receive this.

To complete the survey, please click on the link below or type the address into a browser:

https://surveys.mcgill.ca/limesurvey/index.php?sid=62812&lang=en

Many thanks for your collaboration!

Date: Wed, 06 Mar 2013 09:05:35 -0600
Subject: [Research-mla] MLA 2012: Research Award Judging Request
Message-ID: <51375B3F.8070602@uic.edu>

Dear Colleague,

I am writing to you in your capacity as a previous judge and/or winner
of an award from the Research Section of the Medical Library Association
or as a member of the MLA Research Section. Amy Donahue, Aileen
McCrillis, and I, co-chairs of the Research Awards Committee, would like
to invite you to serve as a judge (or pre-judge) for research papers
and/or posters prior to and/or at the 2013 annual meeting in Boston in
May.If you are presenting a paper, you may still participate as a poster
judge.Poster presenters may participate as paper judges.Even if you are
not planning to attend the annual meeting, we will be reviewing the
abstracts of the posters and papers before the meeting to narrow down
the number of submissions to be judged onsite. We could use your help.

If you are willing to help, please simply fill out this online form by
March 20:
https://docs.google.com/forms/d/12HtEejJ7FbDvrGMmZb_N6Mp4tfBkD-
UJDAjTYW9Fwq8/viewform

Duties for those pre-judging are as follows.

1.View assigned paper or poster abstracts online before the meeting and
rate the abstract using the abstract section of the judging evaluation
forms that will be provided.

Duties for those judging at MLA are as follows.

1.Attend the meeting of the Research Awards Committee on Sunday, May 5
from 8:00 a.m. ? 9:00 a.m. to receive final assignments and
instructions.If this is not possible, other arrangements can be made.

2.The poster judges visit assigned posters during the poster session

window to be able to talk with the presenters.

3.The paper judges attend assigned paper sessions.

4.All judges complete the evaluation forms and submit the results online
by May 10, 2013 or by an otherwise agreed upon deadline.If you are not
able to submit the results online, results can be submitted in print by
the end of the annual meeting.

Thanks,
Sandy De Groote

Subject: [Research-mla] EBLIP 7 Registration now Open
Message-ID: <5141B308020000B50001C01E@hsc-iagate1.health.unm.edu>

Dear MLA Research Section Member,

I often hear from Research Section members that they'd like to attend
one of the biannual International Evidence Based Library and Information
Practice (EBLIP) conferences but that they cannot afford (or justify)
traveling to one of the exotic international destinations in the UK,
Sweden, or Australia.

This year EBLIP will be in nearby Canada so I am hoping we can have
better representation. The MLA Research Section has co-sponsored this
biannual event since the second international conference so we have a
long association with EBLIP.

Jon Eldredge

Registration is now open for EBLIP7!
Join us in sunny Saskatoon, Saskatchewan, for the 7th International
Evidence Based Library & Information Practice Conference, July 15 * 18,
2013.   Come be a part of three exciting days of dynamic and diverse
conversations.   The full program is now available on our website at
http://eblip7.library.usask.ca/
Take advantage of our early-bird rates by registering by 30 April
2013.
Come and explore evidence-based library and information practice with
us, where the possibilities are endless!

Facebook: www.facebook.com/groups/eblip7/
Follow us on Twitter! @eblip7

Subject: [Research-mla] Help with a question

Message-ID: <CALpJ+YaAJ2LCKgfyzte_MdCQmiNhk9SEAyUim-
y=sebSj5cr+A@mail.gmail.com>

A patron sent me this question:

Is there a "master concordance" that shows how most medical journals should
be abbreviated?
We've been just looking up each journal in PubMed, one at a time, which is
very time-consuming.

This is how I answered. If anyone has anything else to add, I would be
grateful.

"Here is one compilation. Note that italicized abbreviations are not to be
trusted. http://home.ncifcrf.gov/research/bja/journams_a.html Another
avenue is to go to Web of Knowledge -> Additional resources -> Journal
Citaiton Reports -> View a group of journals by subject category -> Submit
-> Ctrl-click (Windows?) or Command-click (Macintosh?)to select everything
pertaining to Medicine -> Submit. This will bring up all the journals
indexed in Web of Knowledge. Unforunately, you cannot display more than the
default display, but, at least, you print all the pages out once and create
a print resource for yourself."

In addition, one of my colleagues helped me to download a text delimited
fileinto an Excel Spread Sheet from the following web site so my patron
could have an electronic file:
http://www.library.uq.edu.au/faqs/endnote/medical_2010.txt

Many thanks!!

From: research-mla [mailto:research-mla-bounces at research.mlanet.org] On
Behalf Of Cleo Pappas
Sent: Thursday, March 14, 2013 3:15 PM
To: research-mla at research.mlanet.org
Subject: [Research-mla] Help with a question

A patron sent me this question:

Is there a "master concordance" that shows how most medical journals should
be abbreviated?
We've been just looking up each journal in PubMed, one at a time, which is
very time-consuming.

This is how I answered. If anyone has anything else to add, I would be
grateful.

"Here is one compilation. Note that italicized abbreviations are not to be
trusted. http://home.ncifcrf.gov/research/bja/journams_a.html Another avenue
is to go to Web of Knowledge -> Additional resources -> Journal Citaiton
Reports -> View a group of journals by subject category -> Submit -> Ctrl-
click (Windows(r)) or Command-click (Macintosh(r))to select everything
pertaining to Medicine -> Submit. This will bring up all the journals indexed
in Web of Knowledge. Unforunately, you cannot display more than the default
display, but, at least, you print all the pages out once and create a print
resource for yourself."
In addition, one of my colleagues helped me to download a text delimited
fileinto an Excel Spread Sheet from the following web site so my patron
could have an electronic file:
http://www.library.uq.edu.au/faqs/endnote/medical_2010.txt
Many thanks!!

Subject: [Research-mla] MLA 2013: Research Award Judging - 2nd request
Message-ID: <5142795C.6080801@uic.edu>

Dear Colleagues,

Thanks to those of you who have already volunteered to assist with
judging before or at MLA. Even if you are not planning to attend MLA
this year, we could use your help pre-judging the posters and papers to
help narrow done the numbers that will be evaluated at MLA. If you are
attending MLA and you are available, we could use your help judging the
finalists for papers and posters. If you are presenting a paper, you may
still participate as a poster judge. Poster presenters may participate
as paper judges.

If you are willing to help, please simply fill out this online form by
March 20:
https://docs.google.com/forms/d/12HtEejJ7FbDvrGMmZb_N6Mp4tfBkD-
UJDAjTYW9Fwq8/viewform

Duties for those pre-judging are as follows.

1.View assigned paper or poster abstracts online before the meeting and
rate the abstract using the abstract section of the judging evaluation
forms that will be provided.

Duties for those judging at MLA are as follows.

1. If possible, attend the meeting of the Research Awards Committee on
Sunday, May 5 from 8:00 a.m. ? 9:00 a.m. to receive judging
instructions. If this is not possible, other arrangements can be made.

2. The poster judges visit assigned posters during the poster session
window to be able to talk with the presenters. The paper judges attend
assigned paper sessions.

3. All judges complete the evaluation forms and submit the results
online by May 10, 2013 or by an otherwise agreed upon deadline. If you
are not able to submit the results online, results can be submitted in
print by the end of the annual meeting.

Thanks,
Sandy De Groote

Hi Cleo

Here's the answer about the ISO standards for journal title abbreviations
that we use in our FAQ.

Kris

Abbreviations are governed by the ISO 4 standard and maintained by the ISSN
International Centre. The annually updated?List of Title Word
Abbreviations?contains the words of the titles of serials processed by the
ISSN network and their abbreviations, approximately 55,650 words in about 70
languages. Visit the list at?http://www.issn.org/2-22661-LTWA-online.php.?

Cultural Differences in Scholarly Practice: Diversity in Creation,
Dissemination, Use, and Abuse of Intellectual Output

Contributed and invited papers

Terrie R. Wheeler<mailto:terrie.wheeler at nih.gov>

Research, and the resulting creation and use of knowledge, occurs worldwide,
and the culture and legality of ownership of information are very diverse.
This session invites presentations from many countries and perspectives on
understanding the diversity of attitudes toward reuse of information,
exploring plagiarism and its sequelae, and advising or training students,
researchers, and practitioners to prevent accidental misuse. Reviews of
systems designed to identify abuses, emerging roles for those who detect and
respond to abuses of intellectual property in academia and research,
editorial work, technology transfer, and related topics are welcome.

Administration Section

Librarians as Researchers: Practicing What We Preach in Scholarly
Publications

Contributed and invited papers

Terrie R. Wheeler<mailto:terrie.wheeler at nih.gov>

Do librarians follow their own advice about scholarly publication practices? Do they publish their findings in indexed journals or proceedings, provide access to their publications, and perform citation analysis of their own works? Topics for contributed papers in this session may include the behavior of librarians as authors in their own literature and as coauthors in systematic reviews, and clinical or research studies. Practices for consideration include, but are not limited to, presence of librarian-authored or coauthored works in institutional repositories, evidence of negotiation of author agreements, review of licenses and contracts for key library journal and book publishers, librarian publishing in open access journals, posting of preprints from librarian authors on their own sites or the staff publications section of their library websites, critical appraisal and summary of the literature that perpetuates the discussion of library research, and tracking of the impact of publications through citation alerts and assessment of citations or links to published work.

Medical Library Education Section, Research Section, New Members SIG

New Voices in an Interdependent World

Contributed papers (students only)

Jodi Philbrick<mailto:jodi.philbrick at unt.edu>

Current master's degree and doctoral students and recent graduates (within one year) will contribute papers on their emerging research. Presentations will illustrate how new and future librarians are linking what they learned in the classroom with current practice in the field of medical librarianship.

19

International Clinical Librarian Conference, Corporate Information Services Section, Pharmacy and Drug Information Section, Research Section, Institutional Animal Care and Use SIG, Library Marketing SIG

International Clinical Librarian Conference 2: Emerging Roles for Health Librarians and Finding New Information in Novel Places

Contributed papers

Sarah Sutton<mailto:sarah.sutton at uhl-tr.nhs.uk>

Where should the health librarian or informationist of the future work? Will we be on the ward, in the clinician's office, or in the virtual learning area? And where will we find the information our customers need? Join us in discovering these new and novel working locations and information sources.

38

Relevant Issues Section; Research Section; Lesbian, Gay, Bisexual, and Transgendered Health Science Librarians SIG

How Data Collection and Ethics Intersect in Eliminating Health Disparities

Invited speaker and contributed papers

Patricia Devine<mailto:devine at u.washington.edu>

The 2011 US Department of Health and Human Services standards for collection and reporting of data-which included lesbian, gay, bisexual, and transgendered (LGBT) populations for the first time-are intended to help federal agencies refine their population health surveys in ways that will help researchers better understand health disparities and zero in on effective strategies for eliminating them. An invited speaker will address this issue. Librarians' emerging roles in data collection, management, and sharing make them valuable partners in this effort. Additionally, librarians' own research about health information-seeking behavior can benefit from these added data. Data is a key feature in ethical concerns for librarians that come into play when they face misleading public discussion or ideas or when they are asked to research something medically dubious, such as reparative therapy. Ideas based on prejudice or superstition can very easily become accepted as fact or basic assumption. What happens when the data or research that a librarian can provide counter that or provoke hostility? Proposals for presentations are invited about things that could range from the effects of bigoted public ideas about LGBT people in health provision, to pressures some librarians have felt about providing accurate consumer health information for politically loaded topics, to difficulties in serving a marginalized people in the face of public prejudice such as the Roma in Europe or undocumented persons in the United States.

38

Technical Services Section, Leadership and Management Section, Molecular Biology and Genomics SIG, Research Section

Leading by Design, Not Default: Focused Direction in Support of the User

Contributed papers

Latrina Keith<mailto:lkeith at nyam.org>

Leading and managing by design is vital in molding the overall user experience. Measured and customized approaches to leadership and management can result in healthier workplaces, improved library operations, and, ultimately, enhanced services and resources to support library users. This session will focus on initiatives and research that have resulted in improved or enhanced user services as a result of conscientious direction and leadership, new and innovative workflows, focused staff development, and careful evaluation of processes, services, and products. Contributed papers may include, but are not limited to, discussions of initiatives such as patron-driven acquisitions, discovery layer experimentation for exposing library resources, workforce development and support of a nontraditional workforce, resource description and access (RDA), and usability testing. Papers may address management theories and practices that were used to guide initiatives, research, and evaluation methods; implementation processes and outcomes (both for the organization and the user); and recommendations for others embarking on similar projects.

Subject: [Research-mla] Call for Research Section business meeting agenda
        items and heads up on bylaw revisions
Message-ID: <1364311274.31753.YahooMailNeo@web1216.biz.mail.gq1.yahoo.com>

Dear Research Section members,

May will be here soon, and so will our business meeting at MLA on Tuesday,
May 7th from 7am - 9am.??

I am writing to ask for your suggestions of items that should be discussed as
part of the business meeting agenda.?? You do not need to plan to attend the
meeting to suggest items for discussion.?? Please tell me what issues you
would like to talk about.??? I would appreciate having agenda items by April
30, although new business can always be raised at the business meeting.

Some items already planned for the agenda include reports from all the
committees, an update on the progress of the Research Agenda systematic
review teams, and a vote on 10 proposed amendments to the Research Section
bylaws to bring us in line with the MLA Model Bylaws for Sections.??

All members should receive an email from the RS Secretary-Treasurer Brooke
Billman by Monday, April 1 with the proposed amendments and information on
voting via absentee ballot. If you cannot attend the meeting in person,
please complete the absentee ballot by April 29.? Those who hope to attend
the RS meeting virtually online on May 7th should still vote via absentee
ballot in case we have problems with the online meeting technology which
would prohibit coordinating the voting between in person and online on the
day of the event.

We would also like your suggestions for programming ideas for the 2014
MLA annual meeting since those will be discussed at meetings on Saturday and
Wednesday at MLA.

Thank you for your participation and we look forward to hearing from you.

Kris Alpi for the Research Section Executive Board

Message-ID: <CD84DEAA.B7A5%roz@dudden.com>

If you are a library director, please respond to this survey request from MLA:

-->> Reporting and Value Survey for Library Directors or One-Person Medical Libraries
The MLA Board of Directors and the MLA/Association of Academic Health Sciences Libraries Ad Hoc Metrics Task Force seek your input on data, metrics, and ideas that can show the value of librarians and the library within your institutions.

Please take about fifteen minutes to tell us how you measure and report the value of your library staff and services. Your information?along with a number of recent studies, articles, and future updates to MLANET?will inform an ongoing campaign for medical librarian visibility, expertise, and value. Thank you very much in advance for your help! Take the survey now or before April 23, 2013.
< http://www.surveymonkey.com/s/SWT2CHR
<http://www.surveymonkey.com/s/SWT2CHR> >

If you are any librarian and you have a story to tell, tell it here. MLA wants to know!

-->> Wanted: Stories about Library Value
What is the value of your library?and your professional service?to the practitioners you work with? Have your users, practitioners, consumers, or administrators commented, emailed, or written to you with compliments about you, your library, or your library?s services, or have you received great comments anonymously from a user survey? Do you have more general stories about promoting the value of your library, eureka moments, ?how I saved the day,? or ?how I made a connection and gained an advocate? stories you can share?

We would like to hear your comments and stories?and share them with your colleagues and on the web in an ongoing campaign for medical librarian visibility, expertise, and value.

Visit the Library Value Stories Survey to tell us your stories?and how we can use them?by April 30.

Dear Research Section Colleagues

We invite you to participate in our investigation of where health sciences
librarians are in terms of preparedness to partner on funded research
involving data from human participants. ?

This survey follows up on a previous survey conducted in October 2012.
?Participants in this current study are NOT required to have participated in
the previous survey, please participate whether you did previously or not.
The anonymous web-based survey in Qualtrics consists of 16 questions and
generally takes about 10-15 minutes. ?The aggregate results will be shared
back to the list members and also presented at the 2013 Medical Library
Association (MLA) Annual Meeting.
?
This survey has been distributed to the email lists of the Medical Library
Association Research Section and the Mid-Atlantic Chapter of MLA. ?Please
respond only once to this survey. ?Note that the survey has been designed to
let only one participant respond on a specific computer. ?You may interrupt
the survey and then return to complete it on that computer, as long as
cookies are not cleared. Computer IP addresses will be deleted before the
data is analyzed.
?
To participate, please go to the URL, read the consent, and click the Next
button to enter the survey.
?
https://duke.qualtrics.com/SE/?SID=SV_cwoStfDgClGQ6Wh
?
If you have any questions regarding this study, please contact the principal
investigator, Emily Mazure (emily.mazure at duke.edu?or(919) 660-1197).

Thank you for your participation,
Emily

Dear Maria,

Please find attached as a Word file, and pasted below as text, the annual
report for the Research Section.? If you have any questions, please let me
know.

Kris Alpi
Chair, Research Section

RESEARCH
SECTION
?
?
Goal
1: Recruitment, Membership and Leadership in the Profession
Beatriz Varman wrote in the MLA-FOCUS March 21, 2013
on the value of joining Research Section (RS). The RS website has been
updated
with a search feature and a volunteer form based on the section?s Google
account (researchsectionmla at gmail.com).

The Awards program is one of our most successful
ways to identify MLA researchers who can engage with our section.? For the
MLA 2013 meeting, there are 162 posters

and 74 papers self-identified as research.? Sixty-five individuals
volunteered to assist with either pre-judging, or
judging at the annual MLA meeting. Criteria for the Best Biennial JMLA
Research
Paper are being finalized for an award in 2014 based on papers from 2012-
2013.

Goal
2: Life Long Learning
Informal mentee/mentor matching is taking place, but
further formal efforts to strengthen the research mentoring program and
better
integrate research section mentor activities into broader MLA mentor efforts
were proposed to the MLA President for review/action in March 2013. ?These
include working with headquarters to
enhance information related to research mentoring, including research mentor
as
a distinct option with guidelines and rewards that can be used to encourage
MLES and ALISE members to serve as research mentors.?

RS submitted a proposal to the CE and Credentialing
committees to recognize the CITI (Collaborative Institutional Training
Initiative) courses on human participant research ethics.

RS collaborated with several sections and SIGs to
offer diverse and reflective programming emphasizing research for our
profession.? Co-sponsored sessions
include: ?International Clinical
Librarian Conference 2: Emerging Roles for Health Librarians and Finding New
information in Novel Places?, which considers where the health librarian or
informationist of the future will work, ?New
Voices in an Interdependent World?, a session for current or recently
graduated master?s or doctoral students, ?How
Data Collection and Ethics Intersect in Eliminating Health Disparities?,
which addresses standards for collection and reporting of data to include
LGBT
populations, and how data can inform research to eliminate health
disparities,
and ?Leading by Design, Not Default:
Focused Direction in Support of the User?, which explores effective
leadership approaches and subsequent evaluation, as well as innovations and
their enhancements on workflow and customer reach.? We are lead on two
programs, Cultural Differences in Scholarly Practice:
Diversity in Creation, Dissemination, Use and Abuse of Intellectual Output?.?
This program addresses cultural issues in
scholarship, which include copyright, plagiarism, and access to content
through
a national university?s institutional repository.? The program entitled
?Librarians
as Researchers: Practicing What We Preach in Scholarly Publications?
ponders how librarians follow their own advice with regard to scholarly
publication practices.??

Goal
4: Creating and Communicating our Knowledge

The MLA Research Agenda Committee developed a plan

for teams of librarian researchers to conduct systematic reviews on top-ranked
15 research questions produced by the Delphi study published in JMLA July 2012.
Over 200 volunteers, including librarians from Australia, Canada, and the UK responded. ?The 15 chairs of the teams
have been appointed.? As of the April 11,
2013 initial conference call, the Committee will provide minimal oversight and
recommendations to use existing widely-accepted guidelines. Otherwise the teams
will refine their respective research question, conduct their literature reviews, and critical appraisals.? Each
team will publish its systematic review in the peer reviewed literature.

Jonathan Eldredge will be presenting on the Research
Agenda systematic review project at the 7th International Evidence Based Library and Information Practice (EBLIP7) Conference, July 15-18, 2013 in Saskatoon, Saskatchewan, Canada. He represented RS on the Programme Committee for this conference; full program
<eblip7.library.usask.ca/#program/at_a_glance>.??

The team analyzing the Research Section Survey
results will submit an article in May or June.? Select survey results related to Section will be posted on the RS
website.

The editors of Hypothesis published two issues and drafted a plan to move in 2013-2014 to a journal
format, re-establish the peer review board, and develop criteria for ?short article? submissions to better recruit presenters to submit a ?short article? on their presentations. RS will explore using MLA?s Web 2.0 technologies for research mentor or collaboration purposes.

MOTION

Subject: [Asis-l] Invitation to participate - Learning style of academic
librarians survey

please pardon cross-posting

Hello Colleagues,

A group of Illinois State University librarians is researching the learning
styles of academic librarians. The purpose of this study is to determine
what, if any, patterns exist within this group using the Felder-Silverman
Index of Learning Styles instrument.

You are invited to complete a brief, voluntary, and anonymous questionnaire
that will gather professional demographic data and to take the Index of
Learning Styles. It will take approximately 15-20 minutes to finish. You may
withdraw at any time. At the end, you will receive your learning style
results and information about those results.

Questionnaire is available at http://www.mlb.ilstu.edu/learning/consent.html

The survey will be available until May 13, 2013.

This study protocol was approved by the Illinois State University
Institutional Review Board (IRB). To ensure that this research continues to
protect your rights and minimize your risk the IRB reserves the right to
examine and evaluate data and research protocols involved in this project. If
you wish additional information regarding your rights in this study you may
contact the Research Ethics & Compliance Office at (309) 438-2529. If you
have additional questions or comments please contact any of the principal
investigators: Chad Kahl, cmkahl at ilstu.edu<mailto:cmkahl at ilstu.edu>,
Jennifer Sharkey, jsharke at ilstu.edu<mailto:jsharke at ilstu.edu>, or
Amanda Rinehart, akrineh at ilstu.edu<mailto:akrineh at ilstu.edu>.

Thank you for your time and participation.

Chad Kahl, on behalf of Amanda Rinehart and Jennifer Sharkey

Chad M. Kahl
Subject Specialist Librarian for Criminal Justice, Law, Military Science and
Politics & Government Associate Professor Milner Library, room 418 Illinois
State University
email: cmkahl at ilstu.edu | IM: mlbcmkahl | phone: 309-438-3454 | fax: 309-
438-3676

This is the final reminder you will receive.? The survey closes on Monday,
April 29th.?? Thank you if you have already participated!
We invite you to participate in our investigation of where health sciences
librarians are in terms of preparedness to partner on funded research
involving data from human participants. ?

This survey follows up on a previous survey conducted in?October 2012.
?Participants in this current study are NOT required to have participated in
the previous survey, please participate whether you did previously or not.
The anonymous web-based survey in Qualtrics consists of 16 questions and
generally takes about 10-15 minutes. ?The aggregate results will be shared
back to the list members and also presented at the 2013 Medical Library
Association (MLA) Annual Meeting.

This survey has been distributed to the email lists of the Medical Library
Association Research Section and the Mid-Atlantic Chapter of MLA. ?Please
respond only once to this survey. ?Note that the survey has been designed to
let only one participant respond on a specific computer. ?You may interrupt
the survey and then return to complete it on that computer, as long as

cookies are not cleared.?Computer IP addresses will be deleted before the
data is analyzed.

To participate, please go to the URL, read the consent, and click?the Next
button?to enter the survey.
https://duke.qualtrics.com/SE/?SID=SV_cwoStfDgClGQ6Wh
If you have any questions regarding this study, please contact the principal
investigator, Emily Mazure (emily.mazure at duke.edu?or?(919) 660-1197).

Thank you for your participation,
Emily

Subject: [Research-mla] Agenda items for Research Section business meeting
        and last call for virtual meeting attendance
Message-ID: <1367002995.99289.YahooMailNeo@web1207.biz.mail.gq1.yahoo.com>

Dear Research Section members,

I am finalizing the agenda for the Research Section business meeting.? Please
send any proposed agenda items to me by 5pm on Tuesday, April 30 so that I
may create the agenda Wednesday and send it out to you all before leaving for
Boston.

If you are planning to attend the meeting virtually on Tuesday between 7am-
9am and have not already let me know that, please do contact me by THIS
Tuesday April 30, so that you can receive the virtual meeting invite that I
will sending out on Wednesday along with the agenda.

Thank you and I look forward to hearing what you would like the section to
discuss.
Kris ?

Subject: [Research-mla] A Quick Question
Message-ID: <517BB6BF.7060708@umich.edu>

I am on a group here at the University of Michigan, Ann Arbor, Michigan,

USA that is discussing assigning ORCIDs to our researchers and faculty.

http://orcid.org/about?lang=en_US

Are you familiar with ORCID and, if so, is your institution considering it.

Thank you for taking a few minutes to respond.

See you in Boston.

Merle Rosenzweig, AMLS
Taubman Health Sciences Library
University of Michigan
Ann Arbor, MI
Chair Elect, MLA Research Section

Sorry for cross posting! Do NOT reply to this email but send questions to
the email listed below. (Thanks! - David Duggar; posting for the two
runners!)

Dear Medical Library Association Members,

In the wake of the Boston Marathon tragedy, Montie' Dobbins and Bart Ragon
want to raise money to help support the victims and families affected by the
events that occurred on April 15, 2013. During the conference we are going to
attempt to run a total of 26.2 miles (notice I say attempt). This roughly
works out to be 5-6 miles a day. For those members who are interested, we are
asking that you donate $1 for every mile we run. If we accomplish our goal,
this means that your total donation would be $26.20. Donations would be made
to The One Fund, a charity set up by Massachusetts Governor Deval Patrick and
Boston Mayor Tom Menino. Donations are on the honor system and you make your
donation directly to the charity. We will not collect any money or track
donations. We will send an e-mail at the end of conference to those who
choose to participate with an update on the total miles ran. During the
conference we will provide updates via Twitter, including maps of our route.
We are currently working out a running schedule and if you would like to run
some or all of the runs, please indicate below. We plan to run a slooooooooow
pace (10-12 min miles).

For more information about the charity please see
www.onefundboston.org<http://www.onefundboston.org>

To register go to http://t.co/eljJqzZ2sX

Questions can be sent to bart at virginia.edu<mailto:bart at virginia.edu>

Thank you for your consideration. We know that Boston is going to be an excellent host city for our conference!

See you all soon

Bart Ragon and Montie' Dobbins

Hi all,

It turns out that two of the program planners for other groups are members of
the Research Section, so Margaret Henderson (also representing the Molecular
Biology & Genomics SIG) and Deborah Lauseng (also representing the Leadership
& Management Section) will be able to combine and do double duty and
represent the Research section at the program planning meeting, and then fill
in Merle Rosenzweig our chair-elect/program planner and help share ideas at
our business meeting on Tuesday, so that we have our ideas together for the
2nd program planning meeting on Wednesday AM.

If there are programming ideas you would like to share for MLA 2014, please
send them to Merle (oriley at umich.edu), Margaret (mehenderson at vcu.edu)
and Deborah (dlauseng at umich.edu)

Thank you all!!!!
Kris

Subject: [Research-mla] RS business meeting agenda and virtual meeting
        instructions
Message-ID: <1367441446.93890.YahooMailNeo@web1212.biz.mail.gq1.yahoo.com>

Dear Research Section colleagues,

Please find pasted at the end of this message and attached the proposed
agenda for the Research Section business meeting held on Tuesday, May 7 from
7 am - 9 am EST.?? There will not be printed copies of the agenda or the
previous year meeting minutes at the session, so please review or print prior
to the meeting if you would like a paper copy.

If you are attending in-person, we will be in convention center rm. 203 and
there will be coffee and a light breakfast.

If you are attending online, we will be using Blackboard Collaborate and the
instructions are below.??

Because I cannot guarantee that the wireless in the conference room will
work, and that the output speakers will carry sufficiently, we will be
reading reports from the officers who are not in session in person, and then
relaying responses from online participants that we read from the chat window
rather than relying on real time audio and video transmissions, so you will
not need headphones or a microphone to participate.? Please test your
computer using the System testing URL:?
http://delta.ncsu.edu/lms_services/synchronous_learning/participants/? to
make sure that you have a version of Java compatible with the session.

Session URL:?
https://collaborate.wolfware.ncsu.edu:443/join_meeting.html?meetingId=1336773
364887
Password: hypothesis

I hope that this will work well. Thanks to Heather Coates for testing it with
me this week. I will try testing it in Boston before our meeting, so I can
let you all know if there will be any problems.

Looking forward to seeing or hearing from many of you!
Kris

Dear Research Section members in District of Columbia, Maryland, North
Carolina, Virginia, Western Pennsylvania, and West Virginia

This $1000 research grant opportunity might be incentive to join the Mid-
Atlantic Chapter if you are not currently a member and live in one of the
states listed above. Membership is only $25 a year -- see
http://macmla.org/membership.html -- and I can attest that the MAC chapter
members are lively and there are a good number of us very interested in
research.

Kris Alpi
Research Section Past-Chair

Date: Thu, May 9, 2013 at 5:49 AM

Subject: [MACMLA-L] MAC/RAC Research & Assessment Grant ? Applications Due
August 1st
To: macmla-l at virginia.edu

MLA2013 has wrapped up and it is now time to prepare for MLA2014, which many
mean a new research project or needing to expand on something that you are
already presently working on. ?If you are looking for funding to effectively
conduct your research, you may be interested in the MAC Research & Assessment
Grants.

The purpose of the Research and Assessment Grant is to promote and stimulate
excellence in the field of health science librarianship and the information
sciences. A grant may be used to support all or part of the costs of a
project,
up to a maximum of $1000. MAC/MLA may award more than one grant in a year for
a
maximum of $1000 in any one year.

In order to be eligible for the grant you must meet the following criteria:

??? ? ? Applicants must hold a graduate degree in library science
??? ? ? Applicants must be practicing health science librarians
??? ? ? The applicant must be a current member of MAC/MLA

Applications are due no later than August 1, 2013, which will be here before
you know it.

For More Information - http://macmla.org/committees/rac/grant.html

Free Webinar: Using the PCORI Methodology Standards to Generate Robust, Relevant, and Timely Evidence for Patient-Centered Outcomes Research

Tuesday, June 4, 2013, 1:00-2:30 p.m. ET

Overview: Patient-centered outcomes research (PCOR) aims to empower patients and their caregivers by providing the evidence needed to make truly informed decisions about their health and health care. In November 2012, PCORI's Board of Governors adopted comprehensive standards for conducting patient-centered outcomes research. The purpose of this webinar is to help researchers understand how the PCORI Methodology Committee hopes the standards will be used to support high quality, scientifically rigorous patient-centered outcomes research, and to provide examples of the standards.

Register by going to http://www.academyhealth.org/Training/ResourceDetail.cfm?ItemNumber=11023 and click on Register.

This webinar is part of a mini-course sponsored by PCORI that will take place on June 25, 2013. The mini-course includes this webinar, two related sessions at the ARM, and an in-person workshop.

Faculty: Joe Selby, Executive Director, PCORI; Sean Tunis, Director, Center for Medical Technology Policy; David Hickam, Program Director of the Assessment of Prevention, Diagnosis, and Treatment Options, PCORI; Robin Newhouse, Chair and Associate Professor, Organizational Systems and Adult Health, University of Maryland School of Nursing; and Brian Mittman, Director, VA Center for Implementation Practice and Research Support, Veterans Administration

By the end of this session, participants will be able to:

    Learn about the requirements for developing the PCOR Methods standards and the process used to develop the standards
    Recognize the variation that exists within the standards, highlighting 3 selected case examples to demonstrate how they should be read, used, and interpreted
    Discuss future directions for the Methodology Committee, and proposed dissemination of the standards

Course Level: 101 (Introductory)

Registration Price: Free

System Requirements: This webinar will be conducted using Adobe Connect, and can be accessed through any major internet browser. The latest version of Adobe Flash Player is required to view these webinars. Download Adobe Flash Player for free.

Please contact AcademyHealth if you have any questions.

Faculty Bios:
Joe V. Selby, M.D., M.P.H., is the first Executive Director of the Patient-Centered Outcomes Research Institute (PCORI). With more than 35 years of

experience in patient care, research, and administration, Dr. Selby works as a family physician, clinical epidemiologist and health services researcher. Prior to his position at PCORI, Dr. Selby served as the Director of the Division of Research at Kaiser Permanente, Northern California. He also holds the position of Lecturer in the Department of Epidemiology and Biostatistics, University of California, San Francisco School of Medicine, and is a Consulting Professor of Health Research and Policy at the Stanford University School of Medicine.

Sean Tunis, M.D., M.Sc., is the Founder and Director of the Center for Medical Technology Policy, an independent non-profit organization that provides a forum for patients, clinicians, and other decision-makers in order to improve the quality, relevance, and efficiency of health care research, particularly in the areas of CER and PCOR. He was a member of the Institute of Medicine Committee on Initial National Priorities for Comparative Effectiveness Research, and has served as the Chief Medical Officer at the Centers for Medicare and Medicaid Services (CMS). Dr. Tunis holds adjunct faculty positions at Johns Hopkins, Stanford and the University of California San Francisco Schools of Medicine.

David Hickam, M.D., M.P.H., is the Program Director of the Assessment of Prevention, Diagnosis, and Treatment Options program at the Patient-Centered Outcomes Research Institute (PCORI). He is a specialist in internal medicine and has 30 years of experience as a health services researcher. His past research has focused on strategies for improving health care outcomes among adults with chronic diseases. He is responsible for developing PCORI's research program that evaluates comparisons among alternative clinical strategies in a broad range of clinical domains. He also provides staff support to the PCORI Methodology Committee.

Dr. Hickam previously held the rank of Professor in the Department of Medicine at Oregon Health and Science University (OHSU). He also held a joint faculty appointment in OHSU's Department of Medical Informatics and Epidemiology. He was a senior investigator in the Oregon Evidence-based Practice Center at OHSU and also served as Co-Director of the health services research and development program at the Portland VA Medical Center. He has expertise in a broad range of both quantitative and qualitative research methodologies. In 2005, he became the founding Director of the John M. Eisenberg Clinical Decisions and Communications Science Center, funded by the Agency for Healthcare Research and Quality. The Eisenberg Center has developed innovative approaches for helping people use evidence-based information to participate in decision making about their health care.

Dr. Hickam received his bachelor's degree from Stanford University, an M.D. degree from the University of California San Francisco, and a Master in Public Health from the University of California Berkeley.

Dr. Robin Newhouse, Ph.D., R.N., NEA-BC, F.A.A.N., is chair and associate professor, Organizational Systems and Adult Health at University of Maryland School of Nursing. She is a leading expert in evidence-based practice for direct care nurses and implementation research. As a health services researcher she studies health care processes and related patient outcomes. She is the Principal Investigator of two funded studies that test nursing interventions to improve patient outcomes in acute care hospitals. She is the recent recipient of a $1.1 million grant from the U.S. Health Resources and Services Administration to enhance the School of Nursing's Doctor of Nursing Practice program in ways that will benefit executive nurse leaders and the communities where they live and work. Dr. Newhouse is a member of the American Nurses Credentialing Center's (ANCC) Research Council and was Chair of the Research and Scholarship Advisory Council for Sigma Theta Tau

International from 2010-2011. In 2011, she was appointed to the Methodology
Committee of the Patient-Centered Outcomes Research Institute (PCORI) by
Comptroller General of the U.S. Government Accountability Office.
Brian Mittman, Ph.D.
Dr. Mittman is co-Editor-in-Chief of the journal Implementation Science and
director of the VA Center for Implementation Practice and Research Support.
His research interests include implementation science, health care quality
improvement, and health care management. He has served as a visiting
professor in the Department of Health Services at the UCLA School of Public
Health and in management at the UCLA Anderson Graduate School of Management.

He is a past chair of the NIH Special Emphasis Panel on Dissemination and
Implementation Research in Health and was a founding member of the Institute
of Medicine Forum on the Science of Quality Improvement and Implementation.
He is active in several other U.S. and international initiatives to
strengthen quality improvement research and implementation science. He is a
member of the Methodology Committee of the Patient-Centered Outcomes Research
Institute (PCORI) and the Association of American Medical Colleges' Advisory
Panel on Research. His published research appears in the Journal of the
American Medical Association, Annals of Internal Medicine, Medical Care,
Health Services Research, and many other journals.

Dr. Mittman received a PhD in Organizational Behavior from the Stanford
University Graduate School of Business.

Hi Merle,

Good list of relevant topics. The only addition I thought we might consider
including is on systematic review support.

Merle - These are all good ideas. I think a program on research/survey design
would probably evolve into an instructional presentation where you'd invite 1
or 2 presenters to teach - you might combine that with finding funds, sources
of funding, etc.

I like the idea of contributed papers on systematic reviews (specifically
librarians' involvement with them) more - especially since the section is
sponsoring the systematic review research project.

Also of interest to me would be a program on how librarians are aiding the
public access requirements at their institutions.

Thanks - PS

Just an additional thought. I'd love to see how to validate a survey instrument/scale added to the research/survey design program, if you weren't already thinking of this. We don't often do this in librarianship, but the question comes up and having at least a cursory idea about how to do it might help a lot of folks.

I also think a program on research design, including finding funds, will
address current membership interest/need. Systematic review is also a hot
topic.

Hi Merle,

Thank you for posting our options and starting this conversation. I would
also like to see us sponsor programming for systematic reviews.

Another topic of interest that may be listed as an option is research data
management planning and sharing.

Thank you,
Valerie Howard

I saw from the messages to the listserv that fellow librarians are working
on this, I wanted to share some tips I have found that have worked for me:

1. The PA compliance monitor helps with identifying delinquent PI's. To be
able to log in you should request from your institution's NIH research
funding coordinator an eRA Commons account with PACR privileges.

2. In my experience about half the delinquent papers are 'owned' by about
10% of the PI's on the list. Tackle these multiple offenders first.

3. Visit PI's one-to-one in their office or lab, there is no substitute for
the personal touch

4. Before you visit the PI, identify which papers the publisher can/will
upload the pre-print manuscript on request. It helps when you meet with
the PI if they can log into the NIHMS and approve a deposit because then
they can see some progress immediately.

5. Encourage PI's to delegate their My NCBI bibliography to you but only so
you can troubleshoot when they have questions. Establish your boundaries
and encourage PI's to use their own resources (e.g. a Departmental
secretary, grad student, or lab tech) to also be added as a delegate to add
records to their bibliography moving forward - you do not have the time to
do this for every NIH funded researcher in your institution.

6. When you talk to a PI use the opportunity to educate them about the four
methods for getting papers into the NIHMS, about how certain publishers are
better at helping authors than others, and encourage authors to negotiate
upfront with publishers to retain their copyright using the SPARC addenda
as the starting point.

7. Touch base with your institution's research compliance folks to get them
to acknowledge the PI's ultimate responsibility for compliance. If your
Office for Research holds a kick-off meeting with PI's, make sure they
mention NIHPA as a line item on the compliance checklist they go through
with the PI at the start of all NIH-funded research activities.

8. Keep a spreadsheet or copies of your email communications with PI's.
Even with your best efforts in some cases the first the PI will become
aware of this issue is when they try to submit an RPPR or form 2590 and are
refused renewal. CYA.

Merle,

I think you've received some good suggestions. Just finishing as the Section
Council CE Liaison, I know there was a lot of interest in systematic reviews
as well as e-science/research data management.

Hi Merle,

Thank you for posting our options and starting this conversation. I would
also like to see us sponsor programming for systematic reviews.

Another topic of interest that may be listed as an option is research data
management planning and sharing.

Thank you,
Valerie Howard

Yes, I have gotten many responses to favoring systematic reviews and
that will be, I think, one of the
sessions the Research Section will sponsor.

Sorry for replying late. I would be interested in:

1. Research data management planning and sharing, especially, when a
research project is a collaborative project with researchers who are in
different organizations in different time zones. How to manage research
data, co-editing, etc. 4-hr lecture, I think, would be long enough to cover
the content.

2. Systematic review: This is obviously a hot topic. Are we going to focus
on how to conduct a search for a systematic review, or how to get involved
in writing the methodology section of a systematic review, or appraising
retrieved articles, and different levels of evidence, or other aspects?
Since we are Research Section, I would think we could lecture systematic
review from the perspective of conducting a research study: searching
literature like data collection for a research study and appraising
literature like data analysis, something like that. This course may need 8
hrs.

3. Survey design: This may include some specific aspects of survey design,
such as sampling, question wordings & formatting, instrument validating (as
Stephanie suggested), how to increase response rate, etc.

4. Research design in general: I found many times librarians do not know
what kind of research design/methodology (quantitative or qualitative;
induction or deduction, etc.) is suitable to answering certain kinds of
research questions, along with proper statistic methods. In addition, when
reporting a research study, sometimes, individual steps of conducting

research are mingled together. I think part of the reason is the authors
are not clear about exact research methodology and the corresponding
process.

Just my two cents. By the way, if we do select the topic, I would be happy
to help out either as a CE course, presentation session, or a panel
discussion, or others.

Thanks!

Donghua

Thank you. For sure systematic review has gotten the most
votes so far. I will send out to the research section the 2
that we will sponsoring and the one that we will be
co-sponsoring.
Do you have a CE in place at the MLA Clearing House?
At this time I believe that all of the CE's have been
selected for 2014.

I especially liked Stephanie Schulte's suggestion re a how-to session on the
psychometrics of survey/instrument design, because I think librarians too
frequently use surveys that have not been tested for validity & reliability-
making the outcomes effectively not research but opinion polls.

Thank you. For sure systematic review has gotten the most votes so far. I
will send out to the research section the 2 that we will sponsoring and the
one that we will be co-sponsoring.
Do you have a CE in place at the MLA Clearing House?
At this time I believe that all of the CE's have been selected for 2014.

Hi, Merle,

I have not done anyting about placing a CE topic to MLA Clearning House.
Will look into that. If we can not catch up MLA 2014, it is fine. We can do
it for 2015 or in other ways to touch on the topic. But CE and panel
discussion probably are better ways to draw more attention.
```

Thanks!

Donghua

Thank you. Research/survey design has been put forth my
others who have responded and your comments on how-to
session are excellent.
```

Wickline, Mary wrote:
> I especially liked Stephanie Schulte's suggestion re a how-to session on
the psychometrics of survey/instrument design, because I think librarians too
frequently use surveys that have not been tested for validity & reliability-
making the outcomes effectively not research but opinion polls.

July 2013

```
From jespar at lsuhsc.edu  Tue Jul  2 14:28:59 2013
From: jespar at lsuhsc.edu (Esparza, Julia M.)
Date: Tue, 2 Jul 2013 19:28:59 +0000
Subject: [Research-mla] Please help! Need to know if there is a basic
 science checklist for Systematic Review/Meta-Analysis
Message-ID: <5D9D96590AF1874E83AD48C46BBB88555D8E2F0D@SH-
ExchMB2.master.lsuhsc.edu>

Sorry for cross posting!

Friends,
```

There is a student who has been working on a specific study involving
molecular pathogens. She wants to supplement this research with a systematic
review of the literature involving her specific molecular pathogen. None of
this work has been done as interventions in people. It is at this point in
vitro work that will hopefully lead to a diagnostic test. Is there an
appropriate checklist like PRISMA or MOOSE that will work for basic science
research??? Has anyone used the MOOSE for this and how did you use it.

Of course she is trying to get something written up so she can work on it the
next year and she needs the proposal done by the end of July before school
starts. So any quick help would be appreciated.

I did search in PubMed

("in vitro"[Publication Type]) AND "meta analysis"[Publication Type]   -
nothing useful

("in vitro"[Publication Type]) AND "meta analysis as topic"[MeSH]

I also search "systematic review" AND "in vitro"[Publication Type]

I found 17544864 and 21562489 but they don't talk about using an established
criteria.

This article 18782354 mentioned using MOOSE but it is really more diagnostic
in reality.

She and I just want to make sure we aren't missing anything that would be
useful in her evaluation. I think she will have to just develop her own data
extraction categories as they did in 17544864 and 21562489 but I want to make
sure.

This is part of a translational science research project so if anyone has
anything please let me know. I will share with the list if there is
interest.

From jespar at lsuhsc.edu Wed Jul 3 09:18:43 2013
From: jespar at lsuhsc.edu (Esparza, Julia M.)
Date: Wed, 3 Jul 2013 14:18:43 +0000
Subject: [Research-mla] Need to know if there is a basic science
 checklist for Systematic Review/Meta-Analysis - ANSWER

Friends,

Several asked for any responses I got to my question of a checklist for in
vitro studies (lab based).

Paul Levett from Himmelfarb Health Sciences Library, George Washington
University in Washington, DC told me that in the Systematic Review workshop
at UPitt Med Ctr Falk Library they recommend using the PRISMA guidelines for
reporting systematic reviews. I reported to my student they could use these
guidelines and then possibly the University of Glascow's checklist for
Diagnosis or Harm/Causation
http://www.gla.ac.uk/researchinstitutes/healthwellbeing/research/generalpract
ice/ebp/checklists/#d.en.19536 to find information for extracting data.
Either way I said she would need to probably create her own template to be
used for each article. Paul mentioned that Himmelfarb has a LibGuide on
Systematic reviews at
http://libguides.gwumc.edu/content.php?pid=252810&sid=2087176.

Ruth Mitchell from Australia suggested that I look at Equator network
http://www.equator-network.org/resource-centre/library-of-health-research-
reporting. When clicking under Systematic Reviews a link to the CDC's HuGENet
website comes up. They have a guide for doing reviews. Handbook of
Systematic Reviews http://www.medicine.uottawa.ca/public-health-
genomics/web/assets/documents/HuGE_Review_Handbook_V1_0.pdf   They say on
the website that "Authors should also apply the Venice guidelines
http://www.cdc.gov/genomics/hugenet/file/print/pub_assessment.pdf to rate the
credibility of cumulative evidence.

So I was happy this student asked this question because I did not know that
HuGENet had its own method of evaluating the evidence and completing
systematic reviews.   I have the database bookmarked to search but never went
to the CDC actual webpage for it.

Thanks to Paul and Ruth for helping me out with this.

Sorry if you have already seen this and for cross posting.

So how can librarians help improve the process?? What do we provide that
improves the safety of patients?? We all know that we help provide
information that can change practice. How do we make the connection between
that and saved lives?? That is a great research question that I hope someone
is thinking about studying!!!

Julie

J Patient Saf. 2013 Jul 15. [Epub ahead of print]
A New, Evidence-based Estimate of Patient Harms Associated with Hospital
Care.
http://dx.doi.org/10.1097/PTS.0b013e3182948a69
James JT.   Source: From the Patient Safety America, Houston, Texas.

Abstract

OBJECTIVES:
Based on 1984 data developed from reviews of medical records of patients
treated in New York hospitals, the Institute of Medicine estimated that up to
98,000 Americans die each year from medical errors. The basis of this
estimate is nearly 3 decades old; herein, an updated estimate is developed
from modern studies published from 2008 to 2011.

METHODS:
A literature review identified 4 limited studies that used primarily the
Global Trigger Tool to flag specific evidence in medical records, such as
medication stop orders or abnormal laboratory results, which point to an
adverse event that may have harmed a patient. Ultimately, a physician must
concur on the findings of an adverse event and then classify the severity of
patient harm.

RESULTS:
Using a weighted average of the 4 studies, a lower limit of 210,000 deaths
per year was associated with preventable harm in hospitals. Given limitations
in the search capability of the Global Trigger Tool and the incompleteness of
medical records on which the Tool depends, the true number of premature
deaths associated with preventable harm to patients was estimated at more
than 400,000 per year. Serious harm seems to be 10- to 20-fold more common
than lethal harm.

CONCLUSIONS:
The epidemic of patient harm in hospitals must be taken more seriously if it
is to be curtailed. Fully engaging patients and their advocates during
hospital care, systematically seeking the patients' voice in identifying
harms, transparent accountability for harm, and intentional correction of
root causes of harm will be necessary to accomplish this goal.

The Emerging Technologies Committee (ETC) for the Health Sciences Libraries
at the University of Southern California is charged with investigating and
integrating new technologies to improve library services.

Health sciences students enter their graduate programs with a variety of
computing devices (laptops, tablets, and phones; Android, Windows, and
Macintosh operating systems) and a wide variety of prior knowledge of web-
based educational and social software. The library is interested in

determining what devices and software they are interested in and need instruction on in order to use library resources effectively.

In 2012, seven institutions throughout the country conducted this survey jointly. The ETC at USC has compiled all the data and have submitted a manuscript for publication. We plan to continue the survey longitudinally for several years to track changes in student behavior and knowledge.

The library plans to administer the survey* (https://uschsl.co1.qualtrics.com/SE/?SID=SV_beb4R4kYVDB0Inz) in August and September 2013 to incoming students of the health professional degree programs.

We are looking for partners at other institutions who are interested in using this instrument to determine the use of technology by students in their health professional degree programs. Using the same instrument in a variety of schools will permit us to compare different programs and universities, potentially providing insight into commonalities and differences in technology adoption and comfort between student populations.

USC reserves the right to publish about the collective data first. We will acknowledge all of the librarians and institutions involved in collecting the survey data. After we publish the first article using collective data, we will share the collective data with all the participating institutions. All participating institutions may publish their own data any time they want. When you publish your own data, we would appreciate your giving credit to the USC Health Science Libraries since we created the survey instrument and initiated this project.

If you are interested in conducting this survey at your institution, please contact Jin Wu, chair, USC Health Sciences Libraries Emerging Technologies Committee, at jin.wu at usc.edu.

*On March 31, 2012 the University of Southern California Health Sciences Campus Institutional Review Board (IRB) determined that this survey is exempt from IRB review.

From bgushrow at iu.edu Tue Aug 20 09:02:43 2013

Dear colleagues and prospective authors:
This message is being posted to multiple listservs - please forward this on
to other listservs or interested parties.
The MLA Book Panel has been discussing the possibilities of a monograph on
librarians' roles in clinical and translational science. This topic is widely
written about in the journal literature and librarians are presenting their
work in this area at many venues.
The Panel is now seeking an editor(s).
Below is the scope statement for the work:

Translational Science: Librarians' Roles (working title)

Clinical and translational science (CTS) is an area of continuing growth and
increased involvement by librarians yet it remains an area of mystery to
many. This volume will provide an introduction to the historical development
and rationale for CTS across the biomedical sciences. The volume will contain
examples or case studies of how librarians are currently engaged in the
translational science programs at their institutions.

Examples (by no means an exhaustive list) of types of librarian activities
and involvement are:
            Connecting researchers to information sources
            Providing access to and training on software and
collaborative/cloud based tools
            Institutional Repositories and Data Management

This book will be an edited work with contributions from academic and health
sciences librarians.

The intended audience is academic librarian interested in or mandated to
support CTS initiatives on their campus, health sciences librarians in
academic or medical settings where CTS research is conducted, and students in
MLIS graduate programs that offer courses in health sciences librarianship.
If you are interested in being considered to serve as an editor for this
work, please contact me.
Thank you.
Barb

Sorry for cross posting!

I highly suggest if you do systematic searching or search for new technology for any reason you review this report from AHRQ done by ECRI Institute. They have lead the Horizon Scanning Program at AHRQ and they have done a methods study. Very interesting!!!!

I loved this section (_underlined_ by me to show emphasis)

"The Internet as a Tool for Identifying Technologies
Of the different types of sources, the Internet holds the promise of timely and efficient searching.2 Internet sites that are easy to scan, free of charge, appear to provide objective information, and have an email alert service were most attractive for horizon scanning.44,45 New Web sites were mostly found through word of mouth or through links from another site.41 Frequently, an _information specialist_ prioritized new sites in an informal way. Sites may also be followed for a short period of time to determine whether the site should be included or excluded in the routine scanning activity. Sites that appear to produce more or a similar amount of useful information than sites that are already scanned were likely to be added to the list of sites to scan.44,45"

I wish it mentioned more on the complex skills and knowledge needed to find much of the information used in horizon scanning but at least there is one mention.

Julie

A Systematic Review of Methods for Health Care Technology Horizon Scanning
http://effectivehealthcare.ahrq.gov/search-for-guides-reviews-and-reports/?pageaction=displayproduct&productid=881

Structured Abstract
Objectives. Since September 2010, under contract with the U.S. Agency for Healthcare Research and Quality (AHRQ), ECRI Institute has been establishing a national program to conduct horizon scanning of emerging health technology. The program's main purpose is to better inform investments in patient-centered outcomes research at AHRQ by systematically identifying and monitoring target technologies to create an inventory of technologies that have the highest potential for impact on clinical care, the health care system, patient outcomes, and cost. We conducted this study to identify existing best practices and effective methods for health technology horizon scanning and to provide input to AHRQ to optimize its horizon scanning program.

Methods. We performed a comprehensive search for both peer-reviewed and gray literature to identify existing horizon scanning methods for emerging health technologies. We searched major medical databases, including MEDLINE, EMBASETM, CINAHL(r), PsycINFO(r), and the Cochrane Library. We also conducted targeted searches of digital libraries, relevant non-health-care-focused journals and databases, and the Web sites of the organizations that have extensive experience in technology horizon scanning or forecasting. We further sought input from a panel of experts and potential users of horizon scanning to identify additional methods. A two-day expert panel meeting was held in June 2011 to discuss the methods identified and potential approaches to incorporate the methods into AHRQ's horizon scanning process.

Results. Our search identified 23 formally established health technology horizon scanning programs, most of which are members of the International Information Network on New and Emerging Health Technologies (EuroScan). We also identified less structured horizon scanning activities performed by other entities, including U.S. government agencies and nongovernmental entities. These programs or activities often have different goals. As a result, their target technologies, time horizon of interest, and methods used for scanning or technology assessment may also vary. However, formally established programs share two sequential components in their horizon scanning process: (1) identification and monitoring of technologies of interest and (2) evaluation of potential impacts of the identified technologies. Most commonly used methods include searching a wide spectrum of sources-electronic and nonelectronic-to identify potential target technologies and seeking input from experts to prioritize or evaluate the technologies identified.

Conclusions. Existing horizon scanning programs use different methods to identify and assess emerging health technologies. The choice of the methods for AHRQ's horizon scanning program should be based on the goal, scope of work, time frame, and funding for the program. It appears that optimization of a horizon scanning program may take longer than a few years.

Subject: [Research-mla] Programing For 2014

Message-ID: <52239DFA.9070103@umich.edu>

Below are the programs that will be sponsored by the Research Section
with the titles, descriptions, and the co-sponsors for each. The
information is also available on
http://mlanet.org/am/am2014/sect_prog/themes.html

Title: Research Survey Design for Librarians
Description: Libraries and librarians often use surveys to assess
attitudes and evaluate services. However, there has been criticism of
library surveys because they are often poorly designed, administered,
and evaluated. In an editorial in the January 2012 Journal of the
Medical Library Association, ?Survey Research: We Can Do Better,? Susan
Starr, editor-in-chief, highlights common problems with library survey
design and solutions to them.
The Research Section and Cancer Librarians Section are sponsoring a
panel to address survey design and ways to create a survey that is
credible and suitable for publication.
The three panel members are:
? Jodi Philbrick, PhD, Course Coordinator, Health Informatics Program,
University of North Texas Department of Library and Information Sciences
? Jonathan Eldredge, MLS, PhD, Associate Professor, School of Medicine
HSLIC Evidence Based Practice and Translational Sciences Collaboration
Coordinator; Associate Professor of Family and Community Medicine. The
University of New Mexico
? Joanne Gard Marshall, LLD, PhD, MHSc, MLS, Alumni Distinguished
Professor, School of Information and Library Science, University of
North Carolina at Chapel Hill

Title: Systematic Review: The Librarian?s Role
Program format: Contributed papers
Description: Cochrane defines a systematic review as one that ?attempts
to identify, appraise and synthesize all the empirical evidence that
meets pre-specified eligibility criteria to answer a given research
question. Researchers conducting systematic reviews use explicit methods
aimed at minimizing bias, in order to produce more reliable findings
that can be used to inform decision making.?
As librarians with skills in searching, organizing, and analyzing
information, we can play a vital role in the systematic review process.
The Research Section and the Informationist SIG invite contributed
papers describing experiences with supporting and conducting systematic
reviews, increasing awareness of systematic reviews, and enhancing
library involvement and collaboration.

ExchMB1.master.lsuhsc.edu>

Greetings fellow Research Section members!

Diane Cooper and I are proud to present the latest issue of the Hypothesis.
This is the first issue of Volume 25 and marks an exciting transition for the

journal. Please read our articles, "Proving the Hypothesis: Completing the Transition to Professional Journal" and "Updating Our Journal: Hypothesis Announces a Journal Change and a New Editorial Board" to learn about the new requested content, submission requirements, and editorial board.

Also included in this issue is an article written by our Past Chair and current Secretary/Treasurer that encourages members to present their research at academic library conferences, as well medical library meetings. This article is featured in the Chair's Column as Kris Alpi's farewell message as the outgoing chair.

Our current Chair, Terrie Wheeler, submitted an article summarizing the Section Programming at the 2013 MLA Annual Meeting in Boston, and the Awards Committee Co-Chairs honor all of the 2013 Research Award recipients in their article.

Thank you to all of our contributing authors, our newly established editorial board, and of course, our readers. We hope that you that you are inspired by this issue and motivated to become an active part of the upcoming changes.

Sincerely,
Deidra Woodson and Diane Cooper, Hypothesis editors

Subject: [Research-mla] Twitter chat tomorrow night
Message-ID:
<26E415AD2CF87D438E892895D415849C87E5C452@ACEXCDB0001B.health.summa.inet>

Hi everyone,

I'm not sure how many of you know about or participate in the Thursday
evening Twitter chats, but I wanted to let you know about them and that I'm
moderating tomorrow's where we'll be discussing research.

All chats are saved so you can go back and see any of the transcripts from
previous sessions even if you can't participate or aren't a Twitter user. The
sessions are VERY informal and generally start out with introductions and
mention of what you happen to be drinking at the time. :)

What is a Twitter chat?
http://socialmediatoday.com/ckieff/252876/quick-guide-twitter-chats

What about #medlibs chats?
http://www.symplur.com/healthcare-hashtags/medlibs/

For the schedule and recaps see:
http://medlibschat.blogspot.com/

It'll be published later today, but here's my spiel for tomorrow's session:

In December I'll be conducting the MLA Webinar on Research 101.
What I'd like to get from the #medlibs chat is:

What is important to #medlibs in terms of research. I only have 90 minutes
for the webcast, but my thoughts are to define research (versus quality
improvement which may be more relevant to hospital librarians), how to ask an
answerable question (something often harder for librarians to do than we care
to admit), study methods (also relevant to QI projects), and how these things
matter in light of the changing healthcare setting, particularly the
Affordable Care Act, and how to demonstrate value...which no longer means
producing stats of how many literature searches were done or ILLs
filled...but rather how is the library saving the institution money while
improving patient outcomes?

I invite you all to participate if you're able, or to check out the
transcript afterward if you can't join us. The sessions started with Nikki
Dettmar (@eagledawg) organizing them and she's even worked MLA CE into some
of them. Mad props go out to her.

My handle is @LaMedBoheme73 - I look forward to tweeting with you!

Subject: [Research-mla] Garfield Research Fellowship in the History of
        Information Science
Message-ID: <CAM4RTnr0GepEiEVZ5=OgoPnrGo4JYNi-
B22BSSLLOZD0AERZBw@mail.gmail.com>

The Medical Library Association Eugene Garfield Research Fellowship
promotes and supports research in the history of information science. The
$5000 fellowship, established in 2013, is to be used for research-related
purposes regarding the history of information science to increase the
underlying knowledgebase in this area and enhance the current and future
practice of the information professions, particularly health sciences
librarianship. Health sciences librarians and information scientists,
health professionals, researchers, educators, and administrators are
eligible. Applicants must have a master's or doctor's degree or be enrolled
in a program leading to such a degree and demonstrate a commitment to the
health sciences. The fellowship is not designed to support research for a
doctoral dissertation or master?s thesis.

The award is not restricted to disbursement in a single year and funding
may be disbursed over a period of up to two years depending on the needs of
the research fellow. The award may be used to supplement or extend other
awards, including other private or government-supported fellowships, but is
not contingent on receiving other awards. Please see the MLA Grants and
Scholarships page (http://www.mlanet.org/awards/grants/) on MLANET for
more information. The submission deadline is December 1.

Inquiries: E-mail, telephone or written inquiries are welcomed. Please
direct inquiries to Maria Lopez, 312.419.9094 x15,
grants at mlahq.org<file:///C:/Users/Ruth%20Fenske/Documents/grants at

        host EBLIP8 in 2015
Message-ID: <523ADE1F.07E0.00B5.0@salud.unm.edu>

>>> "Wilson, Virginia" <virginia.wilson at USASK.CA> 9/19/2013 10:42 AM >>>

Please forward to any relevant discussion lists/newsletters/social media
venue:

8th International Evidence Based Library and Information Practice Conference
in 2015: Call for Expressions of Interest

The International Advisory Committee (IAC) for the International Evidence
Based Library and Information Practice (EBLIP) Conference Series warmly
invites expressions of interest from individuals, organizations, and
associations working in the public sector (e.g. academic, school, local and
regional authorities, national associations) to host the 8th International
Evidence Based Library and Information Practice Conference in 2015.

Supporting Details and an Expression of Interest Template are available at
http://library.usask.ca/ceblip/eblip8/

Candidates wishing to host the Conference must apply to Virginia Wilson, the
Convenor of the IAC, virginia.wilson at usask.ca by Friday, November 29,
2013 using the official Expression of Interest Template. Applicants are
encouraged to provide additional information supporting their bid.

The EBLIP Conference is a biennial conference designed to promote the use of
best available evidence to improve library and information practice in
libraries of all types. It aims to bring together practitioners, researchers
and students involved in critical and reflective information practice to
think through new ways to address contemporary issues of evidence based
practice in less isolated, more collaborative, ways. The first EBL(IP)
Conference took place in Sheffield,UK in 2001. The success of this conference
led to further successful conferences in Edmonton (Canada, 2003), Brisbane
(Australia, 2005), Chapel Hill (USA, 2007), Stockholm (Sweden, 2009), Salford
(UK, 2011), and Saskatoon (Canada, 2013).

Brief details are as follows:

EBLIP Conferences typically last between 2.5 and 3 days. They are usually
accompanied by a Continuing Education Program of workshops of between 0.5 and
2 days duration. (The Continuing Education Program is optional for delegates
and is not included in the Registration fees for the Conference). A Social
Program typically includes a Welcome Reception and Conference Dinner (both
included in the Registration fees) and additional optional pay-as-you-go
social events. Day registration rates are generally provided to encourage
attendance by local participants.

Conference venues have previously included academic, hotel, and commercial
conference facilities. Local organizing committees (LOCs) should be
coordinated by a professional working in the public sector (e.g. academic,
public, school, national, professional organization). Conferences are run on

a not-for-profit basis with any surplus (after all deductions) being handed on to the successive local organizing committee. An exhibition of commercial sponsors may be organized as a necessary source of conference income.

The Conference Programme is the responsibility of the International Programme Committee (IPC) co-ordinated by an IPC Chair/Co-chairs working in liaison with the LOC. The Conference Program should include invited keynote speakers (whose travel, accommodation and registration is typically covered by conference income), submitted papers (abstracts) (selected by the IPC) and submitted posters (abstracts) (again selected separately by the IPC). Paper and poster abstracts should be reviewed by the IPC using a double-blind review process.

The EBLIP International Advisory Committee (IAC) comprising representatives from the previous hosts will select the venue for the conference based on submissions of Expressions of Interest from potential LOCs.

Supporting Details and an Expression of Interest Template are available at http://library.usask.ca/ceblip/eblip8/

Candidates wishing to host the Conference must apply to Virginia Wilson, the Convenor of the IAC, virginia.wilson at usask.ca by Friday, November 29, 2013 using the official Expression of Interest Template. Applicants are encouraged to provide additional information supporting their bid. The successful applicant will be notified by December 31, 2013.

Subject: [Research-mla] New Free Open Access journal - eGEMs (Generating
 Evidence & Methods to improve patient outcomes)
Message-ID: <5D9D96590AF1874E83AD48C46BBB88555FD2D7CA@SH-ExchMB1.master.lsuhsc.edu>

Hello friends - sorry for crossposting!

Here is a new free open access journal eGEMs (Generating Evidence & Methods
to improve patient outcomes).
http://repository.academyhealth.org/egems

eGEMs (Generating Evidence & Methods to improve patient outcomes), a product
of the Electronic Data Methods (EDM) Forum, is an open access journal focused
on using electronic clinical data to advance research and quality
improvement, with the overall goal of improving patient and community
outcomes.

The EDM Forum is supported by the Agency for Healthcare Research and Quality
(AHRQ) through the American Recovery & Reinvestment Act of 2009, Grant U13
HS19564-01. eGEMs publications do not reflect the official views of AHRQ or
the United States Department of Health and Human Services.

Looks like a very interesting title. I find it funny that they are creating
their own depository instead of using PMC. Does the government always have
to reinvent the wheel???

Subject: [Research-mla] NEED: Examples - Agreement, Contract,
 Memorandum of Understanding,
 etc. for Systematic Review Search Services or any searching or services
 offered by your library
Message-ID: <5D9D96590AF1874E83AD48C46BBB88555FD2DA1E@SH-
ExchMB1.master.lsuhsc.edu>

Hello friends - sorry for crossposting,

Since I basically struck out with the cadaver search (one response but not
really a protocol but still useful) I'm onto a new item. I hope that many
more of you can help with this.

We are looking for examples of agreements, contracts, memorandum of
understandings, etc. for Systematic Review Search Services or any searching
or services offered by your library.

This does not have to be for money but could possibly be something like "if
the librarian does X level of service then they would be made a co-author on

the publication". So anything outside of Interlibrary Loan is what we are
looking for.

This would be between the library/librarian and the lead faculty member of
the research.

If any of you are charging for these or other types of searches I would like
to know that as well. We are trying to figure out how people handle this in
general. I will summarize with the list. If you send me a document please
let me know if I can refer to you so others can ask you for a copy.
Otherwise I will NOT share information on who gave me information to protect
privacy.

Thanks,

Julie

Call for Participation, MLA ?14 "Building Our Information Future", May
16-21, 2014, Chicago

Be inspired to think how you can be an architect of a health information
landscape that responds to the challenges of growth and an ever-evolving
environment. How will you design your blueprint for the information
future? What tools will you need? What skills will be required? How will
you know if what you construct is useful? The Medical Library
Association's 2014 Annual Meeting will offer you an opportunity to plan and
style an information future that reflects expanding roles to reach new
heights.

The 2014 National Program Committee invites you to submit an abstract for a
contributed paper or poster that reflects on the best ideas for the future
of information practices in health sciences librarianship. To begin, review
the instructions in the paper/poster FAQ at:
http://mlanet.org/am/am2014/sect_prog/index.html and then log in to the
online submission process. Abstracts are due November 1, 2013.

Make plans to join your colleagues for MLA'14 in Chicago to build your
information future at the largest meeting of medial librarians and heath
sciences information professionals in the world! In January, preliminary
programs will be mailed to MLA members and meeting registration will
officially open. For more information see:
http://mlanet.org/am/am2014/index.html

Subject: [Research-mla] MAC/MLA's Research Mentoring Program: Looking for
        mentors
Message-ID:
<9677e51de66c46d2b351dfd572be5484@BL2PR03MB241.namprd03.prod.outlook.com>

   Hello all,

    The Mid Atlantic Chapter of MLA's Research & Assessment Committee is
starting a mentoring program for its chapter where individuals can be
connected to a mentor for help with their research projects. I serve as
chair of the MAC/RAC and I'm looking for some experienced librarians who
would like to serve as research mentors. If you have at least 5 years'
experience with research, please consider sharing your knowledge and
abilities with others by becoming a mentor. Some of the benefits you might
experience as a mentor are: collaborating with mentee librarians with
diverse experiences, skills and contacts; and, meeting others who have
career goals, interests, and job functions similar to yours. It's also a
great way to give back to the profession if you have benefited from a mentor
in the past.

    Please contact me if you are interested. I can be reached at (304) 293-
1921, or by email, listed below.

            Thank you,

                Virginia

but it is only 7 am here! I would love to see this mapped out for how
libraries information fit? Is anyone up for that?? LOL

Sorry for crossposting!

Clinical Modeling?a Critical Analysis ??

Original Research Article

Abstract

Background
Modeling clinical processes (and their informational representation) is a
prerequisite for optimally enabling and supporting high quality and safe care
through information and communication technology and meaningful use of
gathered information.

Objectives
The paper investigates existing approaches to clinical modeling, thereby
systematically analyzing the underlying principles, the consistency with and
the integration opportunity to other existing or emerging projects, as well
as the correctness of representing the reality of health and health services.

Methods
The analysis is performed using an architectural framework for modeling real-
world systems. In addition, fundamental work on the representation of facts,
relations, and processes in the clinical domain by ontologies is applied,
thereby including the integration of advanced methodologies such as
translational and system medicine.

Results
The paper demonstrates fundamental weaknesses and different maturity as well
as evolutionary potential in the approaches considered. It offers a
development process starting with the business domain and its ontologies,
continuing with the Reference Model?Open Distributed Processing (RM-ODP)
related conceptual models in the ICT ontology space, the information and the
computational view, and concluding with the implementation details
represented as engineering and technology view, respectively.

Conclusion
The existing approaches reflect at different levels the clinical domain, put
the main focus on different phases of the development process instead of
first establishing the real business process representation and therefore
enable quite differently and partially limitedly the domain experts?
involvement.

Applications are now being accepted for MLA?s Rising Star Program!

The MLA Rising Star program has been developed for MLA members who are
interested in attaining leadership roles in MLA but who have not yet become
active at a national level. The one-year leadership development program
matches each Rising Star with a mentor in a curriculum that includes:

  *   learning how MLA succeeds through the volunteer efforts of its members;
  *   the roles of the MLA Board and staff; and
  *   project management skills applied to an actual MLA project.

Application and information can be found online at:
http://www.mlanet.org/pdf/awards/20130827_rising_star_app.doc
Applications are due November 1, 2013.

Also, if your chapter, section, or committee is interested in submitting a
project for the program, the host/mentor application can be found online at:
http://www.mlanet.org/pdf/awards/20130827_rising_star_host_app.doc
Host/Mentor applications are also due November 1, 2013.

Do you know someone who has developed an application, tool or interface to
help deliver medical information to their clients? Perhaps the technology
fits the definition of meaningful use?   Maybe you know of an innovative way
that a library or informatics center is using technology to better serve a
specific group of people. If so, consider nominating a colleague for the
Thomson Reuters/Frank Bradway Rogers Information Advancement Award.
Technological advances for this award are considered both on their merit, and
the extent of their impact.

The award is presented annually in recognition of outstanding contributions
in the application of technology to the delivery of health sciences
information, to the science of information, or to the facilitation of the
delivery of health sciences information. The award is sponsored by Thomson
Reuters. The recipient receives a certificate and a cash award of $500.

Deadline for applications is November 1.

Complete information and nomination forms can be found at

        Public Health
Message-ID: <5D9D96590AF1874E83AD48C46BBB88556CC72726@SH-
ExchMB2.master.lsuhsc.edu>

This may interest some of your or public health faculty or researchers.

December 3, 2013 | 12:00-1:30pm ET

Join AcademyHealth for a free webinar on methods for conducting comparative
effectiveness research (CER), and new approaches for utilizing those methods
to address population-level inquiries.

Dr. Anirban Basu will present emerging methods used for CER, and suggest
strategies for their application to public health. Dr. Marisa Domino will

describe her research, applying CER methods through Public Health Services and Systems Research (PHSSR).

This webinar will be of interest to those investigating systems and population level health challenges, including health service researchers who would like to examine the delivery of health services in public settings. The workshop assumes basic familiarity with the goal of CER.

http://www.mmsend2.com/link.cfm?r=704203949&sid=27795954&m=3104941&u=AcadHealth&j=0&s=http://www.academyhealth.org/Training/ResourceDetail.cfm?ItemNumber=12237 or
http://tinyurl.com/m2fnej5

More details
Overview: Traditional comparative effectiveness research (CER) for healthcare has examined the effectiveness, benefits, and harms of different treatment options (AHRQ<http://effectivehealthcare.ahrq.gov/index.cfm/what-is-comparative-effectiveness-research1/>). This type of analysis is also essential to determining the success of public health interventions and the delivery of public health services. In this webinar, speakers will discuss proven and emerging methods for conducting CER, and propose approaches for utilizing those methods to address population-level inquiries. Dr. Anirban Basu will first present emerging methods used for CER, and suggest strategies for their application to public health. Dr. Marisa Domino will then describe her research, applying CER methods through Public Health Services and Systems Research (PHSSR). This webinar will be of interest to those investigating systems and population level health challenges, including health service researchers who would like to examine the delivery of health services in public settings. The workshop assumes basic familiarity with the goal of CER.

December 2013

Sorry for crossposting!

Friends,

I am updating a class I teach called "Searching for Quality" that uses
quality improvement as a means to teach nurses and others to search databases
and other resources for quality improvement information. I'm looking for
some basic data on how others are using the National Guideline Clearinghouse
and the National Quality Measures Clearinghouse to incorporate into the
class. If you have used the resources (even if only once in the last year
for either one), please fill out the survey. If you don't use the resources
but others do please pass this on. I'm not limiting the survey to anyone one
group.

Call for Applications: *Evidence Based Library and Information Practice*
Evidence Summaries Writers

EBLIP seeks to add six writers to the Evidence Summaries Team. Evidence

Summaries provide critical appraisal syntheses for specific research articles. These research synopses provide readers with information regarding the original research article's validity and reliability, thus providing information on the presence or absence of evidence with which to make informed decisions. Evidence Summaries Team members are required to write two evidence summaries per year, with a two year commitment to the journal. Evidence Summaries cover all areas of library and information studies and we encourage applications from information professionals in areas such as school, public, and special libraries, as well as academic settings.

Interested persons should send a statement of interest, indicating areas of strength they would bring to the role, as well as a brief resume to Heather Pretty (Associate Editor, Evidence Summaries) hjpretty at mun.ca by January 13, 2014. Applicants who are shortlisted will be asked to submit a sample evidence summary.

**Please note that *Evidence Based Library and Information Practice* is a non-profit, open access journal and all positions are voluntary and unpaid. The positions are an excellent opportunity for continuing professional development and gaining experience in reviewing or critically appraising library-related research.

**Only those applicants who are selected or shortlisted will be contacted by the Editors.

About the journal:

Published quarterly by the University of Alberta, this peer reviewed, open access journal is targeted at all library and information professionals interested in an evidence based model of practice. By facilitating access to library and information studies research via original research articles and evidence summaries of relevant research from the library literature, *Evidence
Based Library and Information Practice* enables information professionals to practice their profession in an evidence-based manner.

Please visit the *Evidence Based Library and Information Practice* website (http://ejournals.library.ualberta.ca/index.php/EBLIP<https://tmail.utk.edu/ex chweb/bin/redir.asp?URL=http://ejournals.library.ualberta.ca/index.php/EBLIP>)
for further information about the journal.

Thank you,

Subject: Institute for Research Design in Librarianship

Institute for Research Design in Librarianship

The William H. Hannon Library has received a three-year grant from the
Institute for Museum and Library Services (IMLS) to offer a nine-day
continuing education opportunity for academic and research librarians. Each
year, 21 librarians will receive instruction in research design and a full
year of support to complete a research project at their home institutions.
The summer Institute for Research Design in Librarianship (IRDL) is
supplemented with pre-institute learning activities and a personal learning
network that provides ongoing mentoring. The institutes will be held on the
campus of Loyola Marymount University in Los Angeles, California. For more
information about the project, including the project partners, the School of
Library and Information Science at San Jos? State University and the
Statewide California Electronic Library Consortium (SCELC), please see the
project website: http://irdlonline.org.
The first institute will be held on June 16-26, 2014, with arrival on campus
on Sunday, June 15, and departure on Friday, June 27.
We are now issuing a call for applications for the IRDL 2014. We are seeking
novice librarian researchers who are employed by academic libraries, or
research libraries outside an academic setting in the United States to
participate in the institute. We define novice researchers as those who may
have conducted research but have not yet had an article published or a

presentation accepted by a peer-reviewed publication or conference;
librarians who have presented peer-reviewed poster sessions will be eligible.
Librarians of all levels of professional experience are welcome to apply.
We seek librarians with a passion for research and a desire to improve their
research skills. The project is designed to bring together all that the
literature tells us about the necessary conditions for librarians to conduct
valid and reliable research in an institutional setting. The cohort will be
chosen from a selective submission process, with an emphasis on enthusiasm
for research and diversity from a variety of perspectives, including
ethnicity and type and size of library.
The Advisory Committee, comprised of librarians with research experience in a
variety of settings, will use an open review process to select participants
who will travel to Los Angeles, California, participate in all institute
activities, and conduct a research project during the 2014-2015 academic
year. The online application requests a proposed research project that will
be revised at the institute and will be the basis for the study to be
completed in the coming year.
Selection criteria:
*   Significance of the research problem to the operational success of
the applicant's library or to the profession of librarianship;
*   Clarity of the proposed methodology;
*   Enthusiasm for research and desire to learn;
*   Commitment to the year-long process of communicating with other
participants and conducting the proposed study.
We will be accepting applications from December 1, 2013 to February 1, 2014.
Scholars accepted to the Institute will be notified by March 1, 2014.
Please contact Project Directors with any questions about the Institute or
the application process:

Subject: Link to Research Seminar Presentation by Brian Detlor

Dear LIS Community,

For those of you who were unable to attend the presentation by Dr. Brian
Detlor in our Research Seminar Series on November 14, a link to the recorded
session with PowerPoint slides is provided here:

https://mediacenter.buffalo.edu/ess/echo/presentation/5716ba97-84da-49f7-
8799-61889e7da13c.

Please join us for future speakers in the Series, which will be advertised
widely.

Sincerely,

Heidi Julien
